

base papers for long shelf-life packaging

Flexible packaging for food plays a decisive role in our modern lifestyle. Made from virgin fiber it is the most sophisticated solution as it is both superior in functionality and sustainability. Our flexible packaging papers for food are leaders in performance and sublime presentation while meeting the eco-friendly standards of the modern customer. Low grammage papers offer outstanding mechanical strength leading to potential basis weight reductions, and thereby having a yield advantage. The high-density papers serve as a base for dry food bags, confectionary wrapping, pouches and for various laminates.
