Dear readers,

We would like to take the opportunity of this 14th edition of the delfort CSR report to cast a look back at 2023. Our extensive research efforts have borne substantial fruit in the form of further advances in the sustainability of delfort solutions. All of our product development revolves around the concept of DfCE (design for the circular economy). Not only do we focus on ensuring that our products are recyclable, but we also make sure that they contain as little raw material as possible.

One of delfort’s core competences lies in being able to fulfill the needs of our customers by delivering extremely lightweight papers that are also robust and functional. This is the philosophy behind our development of genuine alternatives to existing materials for – and in collaboration with – our customers, enabling them to save up to 80% volume in waste. We are also focusing on the re-use of fibers, which allows us to close the recycling loop. In markets that do not have adequate waste collection systems in place yet, the compostability of our products is of key importance.

In line with the UN Sustainable Development Goals and the Ten Principles of the UN Global Compact, we continuously work toward driving delfort’s sustainability forward on all levels. Having invested no less than €79 million in the modernization of our production facilities and in processes to reduce carbon emissions in 2023, we are sending a clear message to our commitment toward net zero, which is also reinforced by our commitment to the Science Based Target initiative (SBTi) Net-Zero Standard. According to our decarbonization roadmap, we will reduce the group’s total carbon emissions by 35% until 2026 (baseline 2023, Scope 1 & 2).

Our progress was primarily enabled by the very close relationships we have with many of our business partners, with whom we have been able to define and pursue tangible target ranges. Our thanks go to all these partners for their commitment.

However, we would not have been able to achieve such results were it not for the backing of our outstanding employees. Supported by a comprehensive training and professional development program in the areas of the environment, social affairs and corporate leadership, our employees are the guarantors of us achieving our shared goals. Every single day, they show an intrinsic commitment to go the extra mile to bring us one step closer to net zero.

Testimony to our successful performance is the Platinum award that we received again from EcoVadis in 2024 – an award that is only granted to the top 1% of the 300,000+ companies that they assess worldwide.

Last but not least, delfort is also focusing on sustainability in terms of corporate governance. Having started in 2022, the generation change that was finalized in 2024, Roland Faihs will be taking on a new role within our group in July 2024, after serving for 17 years as CFO and COO. He hands over the reins to Hannes Kinast as COO and Ilkka Saarinen as CFO, who have joined the existing team of Martin Zahlbruckner (CEO) and Christoph Steger (CSO). Both Hannes and Ilkka have moved internally within delfort, ensuring continuity in delfort’s contribution to a better and more sustainable world.

This report provides an insight into the progress that delfort has made in 2023. It was a year marked by a multitude of challenges and uncertainties. Having now entered its second year, the war in Ukraine threw its shadow over the entire global economy, and the reignition of the conflict in the Middle East brought additional uncertainty.

Furthermore, high inflation has continued, contributing to a significant change in consumer behavior in virtually all areas in which delfort operates. However, our portfolio has enabled us to benefit from the situation in different business segments despite the challenges – thanks to the continuing trend that is driving forward product sustainability. We were not able to meet all of our ambitious goals in full. But where there’s a gap, there’s an even greater will to go another extra mile. We are well aware that the path toward net zero carbon emissions is a challenge that requires a lot of effort from employees, customers and suppliers. However, it is a path that is absolutely necessary – and we can manage it, together!

We hope that you will find this CSR report inspirational and look forward to receiving your feedback at sustainability@delfortgroup.com.

Yours sincerely,

Hannes Kinast
Martin Zahlbruckner
Christoph Steger
Ilkka Saarinnen

Roland Faihs

Supported by a comprehensive training and professional development program in the areas of the environment, social affairs and corporate leadership, our employees are the guarantors of us achieving our shared goals. we revolutionize paper

Founded in 2006 and headquartered in Austria, delfort is a global innovation leader in developing, manufacturing and distributing specialty papers. We are a team of 3,220 employees who collaborate across more than 20 countries. Our family-owned company runs six paper mills, seven converting facilities and seven sales offices. With over 1,500 types of specialty paper delivered to more than 100 countries worldwide, our products can be found in various industries.

High standards and enthusiasm for what we do are not only reflected in our core philosophy of creative collaboration but can be felt in every single project. Tomorrow’s needs will always drive the paper industry to evolve – and delfort with it. We encourage and support industries in their transition toward circularity, as we unlock the power of renewable resources, and we shape papers’ future.

a safe place to work
Our occupational safety campaigns again contributed to a 26% reduction of work-related injuries compared to 2022. Additionally, we have achieved 365 accident-free days on 14 sites.

EcoVadis platinum medal
2024 is the third year in a row that EcoVadis has awarded us with the “Platinum” medal for outstanding achievements in the areas of Environment, Labor & Human Rights, Ethics and Sustainable Procurement.

“B” in CDP’s 2023 rating
We have been recognized by the global environmental non-profit organization CDP in all three categories with the very good rating of B/B- for our management in corporate transparency and environmental performance. We received a B rating in forests and a B- in climate change and water security.

united forces for recyclability
As a member of 4evergreen, we join more than 100 companies in advancing the sustainability and circularity of the fiber-based packaging industry with recyclable solutions.
Ultra-light. High-performing. That’s what our portfolio is all about. While our papers weigh up to half as much as conventional paper, they feature excellent functionality.

baking & cooking
Whether for professional or household use, our papers offer excellent release and grease-resistant properties for high-temperature cooking, baking, frying and grilling.

thinprint
Unleash the power of our lightweight thinprint papers for accurate and easily readable texts and product information, perfect for any publications and leaflets.

design, sketch & archive
Specialty paper in the true sense of the word: archive paper engineered for enduring lifespans, outstanding design paper or easy-to-use transparent sketch paper.

release base & label face
Superior strength, transparency, silicone resistance, cost-efficiency and quality – the ideal solution for silicone coating, lamination and die-cutting.

food packaging
What a blast! Be part of a sustainable future with our fiber-based food packaging solutions, available with or without barrier.

non-food packaging
We customize our paper solutions to your needs: Highly transparent, super light, colored, versatile, wrinkle-resistant, robust and rich to the touch.

print & flexibles
Explore our packaging with outstanding and colorful printing designs: shrink sleeves and cosmetic packages, bottle labels and tobacco pouches, to name but a few.

laboratory & analysis
Our laboratory, LIP testing and analysis papers are perfectly manufactured for filtration, analysis and laboratory applications.

battery separator
Our advanced fiber-based battery separators are an important part of lithium-powered battery applications.

electrical insulation
Let’s power up the future! Our electrical insulation and crepe papers are leading the markets and can be applied in the most demanding high voltage environments.

cigarette & tobacco
We offer modern equipment, experienced experts and a fully integrated innovation process for all cigarette paper and packaging needs.

Empowered by our core philosophy of creative collaboration, we want to enable customers to contribute to the healthiest planet possible. Our mission is to support the success of our customers by means of tailor-made solutions. We achieve this by placing our customers at the center of our strategic focus and continually striving toward improvement and excellence.
We are well prepared to address challenges and to strengthen delfort for the future. Four pillars define our path, as we navigate our sustainability journey. We monitor progress and implement systematic changes. For 14 years now, we have been providing our customers with a clear picture of where our journey is heading.

Below you will find the 2030 goals we set for ourselves in 2019.

**SUSTAINABLE PRODUCTS**

we innovate

by offering functional and sustainable choices, and supporting circular economy

- Responsible wood pulp sourcing, purchased only from certified suppliers
- 100% of new products will fulfill our sustainability framework

**SECURE BUSINESS**

we support your

by running a responsible, resilient and safe organization

- 100% committed to conducting our business ethically, responsibly, and in compliance with applicable laws and regulation
- 100% responsible, value-driven procurement practices

**CLIMATE ACTIONS**

we leverage

by optimizing our production and processes, and efficiently using resources

- 20% reduction of specific GHG emissions*
- 15% improvement of specific energy efficiency*
- 20% reduction of specific freshwater usage*

**EMPOWER PEOPLE**

we

by promoting an inclusive, safe and rewarding working environment

- Zero fatalities and no Lost Time Accidents on all sites
- 100% access to annual development reviews for all employees
- 100% access to our delfort-specific training program for all employees
We build prosperous, value-driven procurement practices to manage business risk, improve the supply chain and create the most advanced solutions for our customers.

By 2030, 80% of our raw materials (pulp, fillers and chemicals) and packaging by spend will be procured in accordance with our supplier management framework.

supplier management framework
We ensure that our suppliers share our principles of ethics, integrity and respect for people and our environment. The tools we use to manage this are our Supplier Code of Conduct, supplier performance evaluation and supplier risk evaluation. Our supply chain is complex and characterized by diversity, as we work with more than 5,300 vendors in Europe, Asia, America and Africa. In the interests of our customers, we attach great importance to risk management and compliance with legal standards that ensure fair and safe working conditions and environmental standards.

89% of our suppliers (by spend) successfully passed our risk evaluation

86% of our suppliers (by spend) successfully passed our performance evaluation

84% of our suppliers (by spend) signed our Supplier Code of Conduct

It is in our and our customers’ interest that we cooperate only with trustworthy, compliant and righteous suppliers.

goal
learn more about our commitment to responsible sourcing

let’s supply change
We strive for long-term partnerships and strictly adhere to due diligence requirements. Our lead buyers conduct supplier audits and check if our suppliers apply social and environmental standards. CSR certifications and external ratings from independent agencies like EcoVadis make sure that our suppliers comply with our stringent standards. 92% of our supplier spend was assessed by certified, independent CSR assessment agencies. Furthermore, we’ve initiated the practice of soliciting GHG emission data from our suppliers. This not only enables us to report our indirect emissions (Scope 3), but it also allows us to collaborate with our suppliers to reduce these emissions.

Sanction screening “Know your Supplier (KYS)” before starting a business relationship with suppliers from high-risk countries

Trainings for lead buyers to support fast adoption of the updated procedures

Group-wide standardization of our supplier risk evaluation and performance evaluation

Development of a uniform risk evaluation sheet for the entire group, as well as standardized guidance for the auditing process

Adoption of a multi-supplier strategy to secure availability of materials

89% of our suppliers (by spend) successfully passed our risk evaluation

86% of our suppliers (by spend) successfully passed our performance evaluation

84% of our suppliers (by spend) signed our Supplier Code of Conduct

It is in our and our customers’ interest that we cooperate only with trustworthy, compliant and righteous suppliers.
Learn more about our commitment to economic performance

a sustainable business partner

2023 was a year marked by a multitude of challenges affecting the entire global economy: the war in Ukraine, the conflict in the Middle East, the high inflation – contributing to a significant change in consumer behaviour in virtually all areas in which delfort operates, and affecting the prices of raw materials as well as the supply chain.

Our rigorous risk management helped us identify market conditions and respond to them in a timely manner. We managed to maneuver through the challenging year, to continue delivering to our customers, to provide stability for our employees, and we have made progress on our sustainability agenda.

Our research efforts have enabled us to advance the sustainability of our product portfolio. In 2023, we have invested no less than €79 million in the modernization of our production facilities and in processes to reduce carbon emissions. Over the last 3 years, our CAPEX investment in relation to depreciation was 46%.

While in the previous year, it was our top priority to maintain deliveries to our customers, and we had to reduce our investment program, we were back on track in 2023 and exceeded our target of 35%.

A solid equity structure with debt <2.5 times EBITDA.

Continuous investment in assets, machinery, equipment and processes measured by CAPEX over 3 years in relation to depreciation being higher than 35%.

We aim for balanced, profitable growth, operational excellence, product and service leadership and an innovation-driven approach.

net sales
delfort is solidly positioned. In 2023, the company achieved a satisfactory sales revenue of 1.14 billion euros, despite the challenging market situation that led to a decline in order volumes. As market dynamics evolve, delfort remains agile and adaptable, consistently striving for innovation to maintain a competitive edge. The resilient strategy has enabled the company to navigate adversities with determination.

a strong equity ratio

delfort is a stable and solid business partner with excellent levels of equity and liquidity. In 2023, our equity in relation to debt (total investments of the year without goodwill in relation to depreciation without goodwill) was -2.34. At the same time, our equity ratio improved to 80%. These figures demonstrate our financial stability despite the turbulent global economy.

high investment rate

Our research efforts have enabled us to advance the sustainability of our product portfolio. In 2023, we have invested no less than €79 million in the modernization of our production facilities and in processes to reduce carbon emissions.

While in the previous year, it was our top priority to maintain deliveries to our customers, and we had to reduce our investment program, we were back on track in 2023 and exceeded our target of 35%.
sustainable products
responsible pulp sourcing

We have always been committed to sustainable forestry and continued, in 2023, to purchase our pulp exclusively from suppliers that are certified by leading international forest certification programs.

By 2030, we aim to purchase 100% certified pulp.

Learn more about our commitment to responsible pulp sourcing.

100% of our wood-pulp was sourced from FSC™ and/or PEFC-certified suppliers.

performance & achievements ’23

99% of our purchased wood pulp was FSC™ and/or PEFC-certified.

controlled origins
We source the remaining 1% exclusively from controlled origins according to FSC™ and PEFC standards.

always in the lead
In mid-2023, the EU Deforestation Regulation came into force. It ensures deforestation-free supply chains, to bring down greenhouse gas emissions resulting from deforestation and assists in the fight against global biodiversity loss.

In the run-up, we worked together with Preferred by Nature and prepared ourselves optimally for the EUDR.

sustainable forestry is a priority
Our suppliers only harvest as much wood as can grow back. Either trees are replanted or they grow back naturally – ecosystems and biodiversity are kept safe. When selecting our suppliers, we ensure that the long-term economic, social and environmental benefits of the forest are preserved for future generations.

We are partnering with Canopy to protect ancient and endangered forests.

controlled origins

We are committed to delivering more sustainable products and solutions that enable our customers to achieve or exceed their sustainability goals with all our product development revolving around the concept of design for the circular economy.

By 2030, 100% of our new product development projects will fulfill at least one of our sustainability framework targets.

- Responsible sourcing: We already take sustainability into account when sourcing our raw materials. This includes, however, is not limited to pulp, chemicals, packaging and other raw materials.
- Efficient & clean production: We continually optimize the use of resources such as energy, heat, water and raw materials in our manufacturing processes. We invest in energy conservation and renewable energy.
- Optimize & facilitate processability: We optimize our papers for further processing and finishing processes, which can lead to reduced ink or coating applications, for example.
- Designed for circularity: We use our technology expertise to develop papers from renewable sources that have superior performance and are recyclable and/or compostable.

We are working on the development of applications that allow for recycled content.

Our team of regulatory experts ensures we and our solutions comply with applicable regulatory requirements (e.g. PFAS-free, SUPD, PPWR, EU TPD, FDA, BfR) and national laws.

R&D departments on each of our sites establish a network with external R&D partners, laboratories, universities and research facilities.

Fully equipped laboratories, rapid prototyping and pilot lines to run fast and effective trials with small quantities for test phases.

State-of-the-art R&D center for tobacco solutions (Wattens/Austria)

Collaboration with R&D partner delsi to develop barrier packaging paper for food and non-food applications (Traun/Austria)

Learn more about our commitment to responsible product design.
In 2023, we achieved a 7.2% reduction in specific heating energy and a 4.7% reduction in NOx compared to our base year of 2016. The decrease in heat consumption is associated with an energy-saving project.

Our specific electricity consumption increased by 15%, and our specific GHG emissions increased by 10.8%. This is linked to reduced output and frequent standstill periods caused by economic challenges in 2023.

We plan to invest 200 million euros in improvement and decarbonization projects over the next ten years. Our most conservative reduction goal already surpasses the targets outlined in the SBTI Net-Zero Standard.

Learn more about our commitment to net zero

By 2030, we aim to improve our energy efficiency by more than 15%* and to reduce our specific GHG emissions by more than 20%*.

*per 1,000 m² of net saleable paper, compared to our baseline 2016
We are continuously monitoring and optimizing water consumption, as well as increasing reuse and recycling.

By 2030, we aim to reduce our freshwater withdrawal by more than 20% per 1,000 m² of net saleable paper*.

---

1) WATER WITHDRAWAL

Our water sources are groundwater from our own wells (41%) and surface water (59%). As our high-quality papers require extremely pure water, we treat extracted water prior to use to prevent the introduction of any impurities.

We apply the WRI Aqueduct Water Risk Framework to determine water risk and evaluate water stress on all our sites that depend on high volumes of water.

We continuously invest in water efficiency projects, process optimization and Best Available Techniques to reduce our water withdrawal volumes.

---

2) WATER CONSUMPTION

We differentiate between usage and consumption of water. Water consumption corresponds to the volume of water that evaporates during paper production, especially in the drying section. Water usage refers to cooling water and process water.

We keep cooling water in separate circuits to reduce freshwater withdrawal and use the warm water for internal processes.

We reuse clarified water to clean our paper machines, which reduces the freshwater consumption of our mills.

---

3) WATER DISCHARGE

All water discharged from paper mills is continuously monitored due to the fact that some paper sites discharge water to freshwater bodies and surface water. Monitoring this water ensures that discharges are always well within the limits for each production site, in compliance with standards and regulations.

Learn more about our commitment to saving water.

---

*compared to our baseline 2016

The illustration below provides an overview of our water management, including measures and figures for key KPIs. In 2023, we slightly increased our specific freshwater withdrawal by 1.2% per 1,000m² of net saleable paper*.
We provide a safe, healthy and supportive working environment and continuously invest in safety initiatives beyond statutory minimum requirements.

We aim to achieve zero Lost Time Accidents on all sites. By 2025, we aim to achieve 500 Safety Awareness Talks per 1000 employees per month.

26% reduction of Lost Time Accidents (A1 + A2) compared to 2022.

We raise awareness for safety

Every two years, we run a group-wide occupational safety campaign, which focuses on various aspects of health and safety. It ensures that we all keep an eye on identifying, highlighting and eliminating potential health and safety risks. In 2023, we also conducted a survey among our global work safety team to gain further insights into all operating companies. The aim of this survey was to assess the internal safety culture perception and to identify weaknesses. Our findings are integrated into our occupational safety campaigns.

The so-called Life Saving Rules campaign came to an end in 2023, and our new campaign – Safe Together – was launched. It consists of eight chapters, each of which will be addressed for three months.

We raise awareness for safety

leaders are role-models

Targeted awareness raising is important to ensure that safe working conditions stay sustainably anchored in the entire company. Our work safety leadership training has been developed in 2023 and will start with a pilot phase in spring 2024 with 88 operational leaders (2 delfort sites) to measure the impact and optimize content, if necessary. A workshop in December 2023 served to prepare everybody involved.
We support diversity in the workplace and provide equal opportunities for employment. Our employees are fairly rewarded for their performance and have equal access to career development so that they can grow their individual talents and strengths.

We will roll out our annual development review process to all sites no later than 2030 and provide all employees access to annual development reviews.

In annual personal development reviews employees and managers discuss performance, training needs, mutual feedback and development opportunities. Additionally, we offer training and education and more than 400 customized activities to support our employees' physical and mental health.

As a family-owned business it is self-evident for us to respect the fundamental human rights of all people within our own company, our supply chains and the communities in which we operate. Appropriate policies and their strict monitoring ensure our compliance. In 2023, we implemented a new Diversity, Equality and Inclusion Policy and started to train all our employees regarding its content.

In 2023, we implemented an annual Human Rights Performance Assessment at board level, concerning our own operations and our supply chain.

The aim of this assessment is to discuss any incidents, risks or impacts regarding labor and human rights, or topics that might have been reported through our whistleblower channels. We also track our performance and review our related policies as part of the assessment. We agree on appropriate measures to minimize risks, future targets and training initiatives.

Learn more about our commitment to fair employment
growth potential

We train and develop our employees at all levels and in a variety of local and global development initiatives tailored to their needs to create a highly skilled workforce and a satisfying work environment.

We aim to implement a group-wide, tailor-made training program that will be reviewed and adjusted as necessary on a regular basis, but at least every two years.

optimal conditions for excellent talents
Throughout the group, we support the development of our employees and enable them to strengthen their skills. With the support of our training program, people grow in their current positions and expand their potential for future roles within delfort. We provide equal access to education and training for all our employees.

the best performance for our customers
A solid talent pool within the company guarantees successors for key positions in the future. Specific skill development programs support long-term employment and enable our business to succeed. This approach ensures the long-term stability of delfort. We deliver the best quality and solutions, and we will always have the right skills to develop, produce and distribute specialty papers.

equal training hours for blue & white collar employees
Vast yet specific knowledge is essential for driving the development of our sustainable specialty paper. In 2023, our employees collectively completed a total of 52,000 hours of training worldwide (Ø 16h/employee). The figures show that our blue collar and white collar employees completed almost the same hours of training, aligning with our diversity strategy aimed at ensuring equal training opportunities for all employees.

Five delfort training programs have been reviewed and updated in 2023
Creation of a vast assortment of permanent e-learning courses about, for instance, work safety, human rights and IT security
100% of our apprentices became permanent employees
International Trainee Program finished in 2023 and next start planned in 2024
The figures show that our blue collar and white collar employees completed almost the same hours of training, aligning with our diversity strategy aimed at ensuring equal training opportunities for all employees.

Corporate social responsibility, as well as our journey toward net zero, is a strategy that we chose to follow many years ago. Since then, we have continually set ourselves tangible goals that reinforce this commitment and ensure that we remain leaders in these key areas. These are based on materiality analyses, which allow us to determine which sustainability issues are of key importance to our stakeholders and to us as a company. We carried out our first materiality analysis in 2014; others followed in 2015, 2016, 2018 and 2020.

In 2023, with the support of an external partner, we started the preparatory process for implementing the EU Corporate Sustainability Reporting Directive, which now provides for a comprehensive double materiality analysis. As this process had not yet been completed at the time this CSR report was prepared, the reported topics relate to the 2020 materiality analysis.

In the course of 2023, we carried out the following steps for our double materiality analysis: First, we drew up a longlist of potentially relevant sustainability topics in accordance with the European Sustainability Reporting Standards (ESRS), determined initial impacts, risks and opportunities and reduced the topics to a shortlist. In comprehensive workshops for the environmental, social and governance categories, the impact of our business activities on people and the environment (impact materiality) and the financial opportunities and risks (financial materiality) for each topic on the shortlist were developed and evaluated together with managers and employees. Following the workshops, the matrix resulting from the assessment was checked and reviewed once again for consistency. At the beginning of 2024, we prepared a detailed overview of the results. Together with the Board of Directors, the Corporate CSR Committee will now develop the strategic implications of this analysis, revise existing targets and KPIs and define new targets and KPIs.

In association with the Board of Directors, the Head of ESG connects, coordinates and steers all sustainability resources to drive forward and implement delfort’s CSR strategy.

In association with the Board of Directors, the Head of ESG connects, coordinates and steers all sustainability resources to drive forward and implement delfort’s CSR strategy.

The CSR Business Team members are key players from our Strategic Business Areas. They are the interface between delfort and our stakeholders with regard to CSR matters and play an important role in representing market expectations and needs with regard to our company.

In our quest to minimize the need for non-renewable materials and support a circular economy, our scientists are developing something truly remarkable – ultra-lightweight barrier papers for food and non-food packaging that perform. Lightweight paper means less raw materials and less weight. This highlights the benefits of reducing greenhouse gas emissions in transportation and minimizing storage space requirements.
continuing our sustainability mission

The following pages complement our 2023 sustainability highlights.
our strategy toward a better future

We drive change in the specialty paper industry, leading by example with sustainable practices. We deliver functional specialty paper solutions with the aim of supporting customers in their transition toward a circular economy by focusing on fairness and equality in all our partnerships. Therefore, we have set ourselves very clear goals that we consistently pursue in our daily operations.

We leverage our key competencies

At delfort, we give paper superpowers. We create specialty papers that perform. Therefore, we focus on market segments that require particularly functional, sustainable and lightweight solutions. Each of our market segments is different. With our outstanding scientific and regulatory expertise, together with our key innovative solutions, we enable our customers to maintain their excellence.

We reinforce our customers’ excellence

Customization is key at delfort. Through our deep understanding of customer needs, complex situations and technical demands, we create invaluable results that put customers ahead of the competition. We thoroughly understand the ideal mixture of ingredients, paper production processes, coating and finishing. To speed up development processes, all our sites have access to R&D departments. Fully equipped laboratories, rapid prototyping and pilot lines enable us to run fast trials with small quantities during test phases. Our state-of-the-art technology and processes deliver high-performance paper for efficient converting.

We contribute to a circular society

At delfort, we look at the whole lifecycle of our solutions, from the origin of raw materials to the way they are designed, produced and processed, including how they can be recycled or degraded after use. We provide true fiber-based alternatives to non-renewable materials. Our products support circular economy principles such as recyclability and/or compostability.

We empower performance-driven teams

Our employees come from diverse backgrounds and possess a wide range of expertise and skills, which drives innovation and enables us to provide customer-focused services. We are committed to ensuring that our employees understand the importance of their role in delivering our products and services and are motivated to perform at their best every day. We value our employees as key contributors to our overall success and create a culture that fosters their professional growth and development. To maintain up-to-date knowledge, we prioritize life-long learning, supported by coaching and mentoring.

We promote fair and balanced partnerships

For many years, delfort has established a strong network with R&D partners, laboratories, universities, and research facilities to scale up innovation. By collaborating with the cross-disciplinary team of scientists and technologists at delsci, we are taking the future of packaging to a new level. Vendors are a crucial part of our business, and we foster partnerships with them based on mutual trust. Developing sustainable supply chains helps mitigate risk, ensure on-time delivery, secure our supply of goods, improve processes, drive innovation, and continuously enhance our products in terms of sustainability and quality.

We foster solid business collaborations

Our business strategy is designed to ensure the continuous improvement of our solid business partnerships, which in turn allows us to invest in value-adding and sustainable projects for our customers. delfort aims to achieve controlled growth, taking into account the prevailing market situation. This growth will be supported by qualified employees, industry-leading products, and innovative specialty paper solutions. The growing need for sustainable and reliable solutions supports our growth. With ample financial resources, we are committed to providing long-term value to our customers and stakeholders by producing responsible products, maintaining sustainable operations, and ensuring supply security.
Our procurement practices are based on mutual respect, communication and close cooperation with our suppliers. Standardized processes and activities are defined in our supplier management framework and result in transparency that benefits risk mitigation as well as collaboration with our suppliers.

Our supplier management framework helps us to manage business risk, improve the supply chain and create the most advanced solutions for our customers. We made it our goal that by 2030, 80% of defort’s raw materials (pulp, fillers and chemicals) and packaging by spend will be procured in accordance with defort’s supplier management framework.

In 2023, we once again exceeded our target with a result of 86%. It is important to note that this number only reflects the result from our paper technology platform, as figures from our printing technology platform are excluded due to their lower purchasing volume.

Our supplier performance evaluations are conducted by our own lead buyers and quality managers, following a group-wide defined process with clear criteria. We assess our suppliers on criteria such as price, quality, capacity, certifications, creditworthiness, logistics infrastructure, supply chain security, as well as environmental and social standards.

We collaborate with over 5,300 suppliers across Europe, Asia, the Americas, and Africa. Of these, 879 new suppliers joined our supplier pool in 2023. 92% of our suppliers are located in Europe. We use additional measures for suppliers from high-risk countries, for example, sanction screening.

Our procurement practices are based on mutual respect, communication and close cooperation with our suppliers. Standardized processes and activities are defined in our supplier management framework.

In 2023, we once again exceeded our target with a result of 86%. It is important to note that this number only reflects the result from our paper technology platform, as figures from our printing technology platform are excluded due to their lower purchasing volume.

Our supplier performance evaluations are conducted by our own lead buyers and quality managers, following a group-wide defined process with clear criteria. We assess our suppliers on criteria such as price, quality, capacity, certifications, creditworthiness, logistics infrastructure, supply chain security, as well as environmental and social standards.

We collaborate with over 5,300 suppliers across Europe, Asia, the Americas, and Africa. Of these, 879 new suppliers joined our supplier pool in 2023. 92% of our suppliers are located in Europe. We use additional measures for suppliers from high-risk countries, for example, sanction screening.

Additionally, we conduct audits with selected suppliers on a good performance rating. In 2023, 86% of our suppliers (by spend) were qualified against our Supplier Performance Evaluation (paper technology platform only).

1– Onboarding. A critical part of our regulatory framework is our due diligence process prior to starting a business relationship. In 2023, we conducted supplier onboarding according to a clearly defined standard process.

2– Supplier performance evaluation & audit process. At least once a year, we use an internally developed supplier performance evaluation system to assess our key suppliers’ compliance with our standards. This self-assessment is carried out by employees from purchasing, quality management and logistics. The results are shared and discussed with the supplier.

Additionally, we conduct audits with selected suppliers. In a first step, our suppliers complete a self-assessment survey that includes social and environmental criteria. Based on their performance, they are assigned to one of three levels. In the second step, a team of defort technicians, quality assurance agents and purchasers visit the supplier on site to ensure that the answers given in the self-assessment reflect the reality. In the case of non-comformities, suppliers are required to take corrective action. We monitor the progress of these actions before reassessing or re-auditing the supplier. In 2023, we initiated a process to develop a standardized, group-wide supplier performance evaluation process that will be conducted once a year and the resulting data analyzed.

In the future, environmental and social performance will have a greater impact on a good performance rating. In 2022, 86% of our suppliers (by spend) were qualified against our Supplier Performance Evaluation (paper technology platform only).

3– Supplier risk analysis. A systematic risk analysis process helps us ensure the availability of material, reduce possible dependencies and make objective purchasing decisions. In 2022, we carried out a systematic risk analysis project for 90% of our suppliers (by spend). As a result, we began to implement a strategy that included qualifying additional suppliers (multi-supplier approach), qualifying alternative products, and increasing safety stock levels. This process will be updated in 2024 to include financial and regional risks. If a supplier is found to have a significant potential negative environmental and social impact, we will terminate our relationship with the company (selective phase-out).

In 2022, 89% of our suppliers (by spend) were qualified against our Supplier Risk Analysis (paper technology platform only).

4 – Supplier development. Our lead buyers analyze the results of the questionnaires and audits according to a clearly defined standard process.

The supplier is provided with a copy of our evaluation and an action plan. If any sustainability deficiencies are identified, we engage with the supplier to understand the risk areas and work together to define actions for improvement. Repeated failure to comply will result in the termination of the supplier relationship. We did not find any of our evaluated suppliers to have a significant actual or potential negative environmental or social impact in 2022. Due to our efforts in supplier relations, we did not need to agree on any improvements resulting from our evaluation or audits, nor did we have to terminate our relationship with any company during the reporting period.

Supplier management framework

Annually in April, we conduct an evaluation of those suppliers for the paper technology platform who accounted for 80% of our spend on raw material (pulp, fillers and chemicals) and packaging during the preceding calendar year.

The figures resulting from this evaluation refer to 2022. We assessed 101 of our existing suppliers using our structured supplier evaluation process, which also covers environmental and social aspects.
economic performance

2023 was a year marked by a multitude of challenges and uncertainties. Having now entered its second year, the war in Ukraine threw its shadow over the entire global economy, and the reignition of the conflict in the Middle East brought additional uncertainty. Furthermore, high inflation has continued and contributed to a change in consumer behavior in virtually all areas in which delfort operates. However, our portfolio has enabled us to benefit from the situation in different business segments despite the challenges – thanks to the continuing trend that is driving forward product sustainability.

The financial stability of delfort is vital to our stakeholders. In particular, our suppliers, customers, employees and the wider communities in which we operate need to be confident that the company is financially secure and fit for the future.

We strive for balanced and profitable growth, operational excellence, product and service leadership, and an innovation-driven approach to ensure that we remain a reliable and long-term partner to our stakeholders.

To assess our performance, we have defined two key objectives – a solid equity structure with debt <2.5 times EBITDA, and continuous investment in assets, machinery, equipment and processes measured by CAPEX over 3 years in relation to depreciation being higher than 35%. Furthermore, we also report on various financial parameters in accordance with the GRI Standards 2021.

The previous year demonstrated that the market is sensitive to geopolitical uncertainties, which caused an increase in volatility. We adapted cautiously, taking into account the impact of high energy prices and rising inflation on personnel, raw materials and logistics costs. Although we faced challenges, we navigated through the turbulent year successfully, ensuring uninterrupted service for our customers. As a forward-thinking company, we also prioritized maintaining stability for our employees.

Our strong economic performance was a direct result of rigorous risk management, which enabled us to assess market conditions and adapt quickly. This approach resulted in a solid operating result.

With substantial financial reserves at our disposal, we are poised to make additional investments in our assets, machinery, research and development departments, and innovative solutions.

This strategic allocation of resources aligns with our commitment to achieving the goals outlined in our 2030 sustainability agenda.

Net sales
Overall, the company is solidly positioned. We achieved a satisfactory sales revenue of 1.14bn euros in 2023, reflecting sufficient order volumes in all our businesses.

Debt <2.5 times EBITDA
Our goal is a solid equity structure with debt <2.5 times EBITDA. In 2023, we again exceeded this target, as our balance sheet shows no net financial debt. Equity in relation to debt (total investments of the year without goodwill in relation to depreciation without goodwill) was -2.34. Our equity ratio remained strong at 80%.

CAPEX investments
Our goal is a continuous investment in assets, machinery, equipment and processes measured by CAPEX over three years in relation to depreciation, at a rate greater than 35%. We have also exceeded this target, with a performance of 46% over the last three years.

Operating costs
In 2023, operating costs (excluding HR and depreciation) were approximately 740m euros (2022: 929m euros). These costs include material expenses, energy and other received services, maintenance, administration and distribution expenses and other operating costs. Expenses for materials, energy and maintenance account for more than 80% of these operating costs.

Financial implications, risks & opportunities due to climate change

We continuously analyze our climate-related risks and opportunities as a basis for adapting to climate change. Climate change presents both risks and opportunities for delfort and our stakeholders. We conducted a comprehensive 360-degree analysis to identify potential disruption risks to our supply chain and our own operations. These risks could lead to increased costs, reduced profits, and limited growth. In the risk management section, a detailed and updated overview of identified risks and mitigation measures is available. We take a precautionary approach to protect our business and our business partners from potential threats.

Reducing global greenhouse gas emissions is critical to mitigating climate change. We are contributing by committing to a clear roadmap for decarbonization by 2050, which we are continuously updating. Since 2009, we have reported on our progress in our annual CSR report. Our roadmap is supported by a series of scenario calculations, concrete actions based on these calculations and long-term investment projects.

In the energy & emissions section, we provide detailed information on the steps we plan to take and where we stand today.

At the same time, we offer specialty paper solutions to help customers transition to a circular economy. Please see our product design section for more information.

Employee wages & benefits

Total expenses for employee wages and defined benefit plans are approx. 191m euros (2022: 167m euros). Most of our retirement obligations are contribution-orientated (97.7%). In the majority of the countries in which we operate, there is a state retirement plan that is also funded through monthly social contributions. Benefit-oriented obligations only refer to former employees who are already retired.

Financial assistance received from government

In 2023, we received approximately 14m euros of financial assistance from governments. This mainly includes subsidies, investment grants, as well as research and development grants. The table below provides an overview of the government assistance and the related amounts per category of assistance on group-level.

Payments

Payments are made to capital providers, governments and communities in the countries where we operate. As a family-owned company, we follow a prudent dividend policy. It is in the best interests of our shareholders to reinvest in the company so that it can continue to develop the next generation of sustainable products.

We are a significant employer and maintain strong local connections with surrounding communities. To support these connections, we provide funding on a voluntary basis. We support projects worldwide, carried out by local citizen associations, research institutes, universities and other organizations, including charitable projects. Our donations amount to up to 100,000 euros per year.

In 2023, we paid approximately 36 million euros in taxes to various governments. The majority of the tax payments were made in Austria (over 70%), followed by Vietnam (just under 7%), the USA (over 6%), and Germany (over 5%). Finland accounted for just over 3% of the tax payments listed above, while Hungary and Malaysia accounted for less than 3%.

Employee wages & benefits distributed

Total: 191m euros
Wood pulp is the main component of our products and offers a unique, sustainable alternative due to its renewable nature. We work with recognized and reputed certification bodies to provide assurance that our wood pulp is sourced responsibly and transparently.

It is our goal to purchase wood pulp exclusively from suppliers that are certified by leading international forest certification programs, such as FSC™ and PEFC. By 2030, we aim to purchase 100% certified pulp. In 2023, 100% of our wood-pulp was sourced from FSC™ and/or PEFC-certified suppliers, and 99% of the purchased wood pulp was FSC™ and/or PEFC certified. The remaining 1% is supplied exclusively from controlled origins according to FSC™ and PEFC standards.

FSC™ and PEFC banned countries

In case of significant conflicts or similar incidents, certification bodies ban wood and other wood products from certain regions. We have made an agreement with our suppliers to refrain from sourcing wood pulp and wood for products from countries that have been banned by FSC™ and PEFC.

FSC™ core labor requirements

FSC™ has incorporated higher core labor standards into the requirements of its Chain of Custody certification: abolition of child labor, elimination of all forms of forced or compulsory labor, elimination of discrimination with respect to employment and occupation, upholding freedom of association, and the effective recognition of the right to collective bargaining. The full compliance with these FSC™ core labor requirements of our certified paper mills is additional proof of our already high human rights standards. Additionally, we worked on identifying evidence of implementation in self-assessments that are verified by auditors.

Strict due diligence system

To maintain our high standards, we apply a strict due diligence system (DDS) for sourcing wood pulp. This is linked to our supplier non-assignment framework. During the selection phase, we assess the pulp vendor to ensure that it is FSC™ and/or PEFC-certified, that the material complies with the EUDR, and that the species of wood used, as well as its origin, is traceable. We also (2015) for on-site visits of supplier operations. Intermediate risk assessments help to identify critical incidents related to slave labor, wood/peach/pulp wood. In 2023, we updated the DDS procedure to comply with the latest requirements.

We are committed to zero deforestation and zero illegal logging by procuring fiber exclusively from responsibly managed sources. In order to minimize the impact of the raw materials we use, our strategy is focused on sustainable pulp.

Chain of custody (COC)

Forest certification programs and Chain of Custody certification guarantee that our customers can rely on strict standards in forestry operation and that the material complies with the EUDR, while maintaining the ecosystem of ancient forests and the landscape. The information provided in this chapter refers to the chapter responsible sourcing for extensive information.

EU Deforestation Regulation

For nearly a decade, the European Timber Regulation (EUTR) has been in force. In mid-2023, it was replaced with the EU Deforestation Regulation (EUDR) to ensure deforestation-free supply chains, to bring down greenhouse gas emissions resulting from deforestation and to assist in the fight against global biodiversity loss. In the run-up, we are working together with Preferred by Nature and are preparing ourselves optimally for the EUDR. We regularly assess the new regulation regarding its progress and prepare our processes for future compliance with all requirements.

Partnering with Canopy

We committed ourselves to bringing forest conservation solutions to the mainstream and to demonstrating environmental and social leadership in the packaging paper industry. To achieve this, we avoid sourcing from the world’s ancient and endangered forests, as well as from other controversial fiber sources, we strive to prevent pollution and to reduce our greenhouse gas footprint. Our partnerships with Canopy mean active cooperation in information exchange and direct contact in case of need. This provides interesting insights regarding solutions or approaches to solve or handle issues that involve our suppliers. Whenever a query arises, we get in touch with our suppliers to learn about the circumstances and possible solution scenarios. In 2023, 99.5% of our wood pulp suppliers (by spend) signed our Supplier Code of Conduct, and we carried out a risk evaluation of all our pulp suppliers. More than 80% of our pulp suppliers (by spend) successfully passed our Supplier Performance Evaluation, and 96% of our pulp suppliers were assessed by a certified, independent CSR institution (such as EcoVadis).

The information provided in this chapter refers to the chapter responsible sourcing for extensive information on our general procurement practices.

Code of Conduct, and we carried out a risk evaluation of all our pulp suppliers. More than 80% of our pulp suppliers (by spend) successfully passed our Supplier Performance Evaluation, and 96% of our pulp suppliers were assessed by a certified, independent CSR institution (such as EcoVadis).
In our quest to minimize the need for non-renewable materials and support a circular economy, our scientists are developing something truly remarkable – ultra-lightweight papers that perform, are responsible and fit for purpose. At delfort, we strive to meet the growing expectations of different users and industries with the lightest papers possible, because lightweight paper means less raw materials and less weight. This highlights the benefits in terms of GHG savings in transport and reduced storage space requirements. In addition, our specialty papers are leading the way with outstanding key attributes such as renewability, recyclability and compostability.

To design products that consider material efficiency and circular design, we apply our framework of responsible product design (sustainability framework), which reflects all stages of the value chain. This includes examining the entire life cycle of our products, from the design of our specialty papers to efficient production and converting, as well as end use and disposal (see sustainability framework description on the right). Our aim is to ensure that 100% of our new product developments will meet at least one of our sustainability framework criteria by 2030. We are well on track to achieve our goal: In 2023, 80% of our new product developments fulfilled at least one of our sustainability framework criteria.

Scaling up with R&D

Our customers can rely on skilled R&D teams, state-of-the-art R&D equipment and partnerships to drive sustainable and innovative specialty paper solutions.

We have R&D departments at each of our sites. Our fully equipped laboratories, rapid prototyping and pilot lines enable us to conduct fast and effective trials during development phases. At our site in Wattens (Austria), we have a state-of-the-art R&D center for tobacco solutions.

At our site in Traun (Austria), we have partnered with R&D expert delsci to develop sustainable barrier papers for both food and non-food applications. A team of over 25 skilled experts develops high-performance paper with barriers against water, vapor, mineral oil, grease, oxygen and aroma, as well as functional sealing for barrier paper packaging. In 2023, delfort expanded its cutting-edge coating laboratory to include a comprehensive shelf-life testing facility. This expansion underscores our commitment to supporting our customers in their transition to barrier paper packaging. By enhancing our in-house packaging development and adding shelf-life testing, our customers receive comprehensive support throughout the development process, from concept to market-ready packaging.

In addition, we’ve built a strong network of external R&D partners, laboratories, universities and research facilities. This has helped us to scale innovation over the years. We also participate in various industry associations, multi-stakeholder organizations and non-profit initiatives to support our customers, retailers and brand owners in driving positive change (→ Memberships associations).

Our framework of responsible product design

Responsible sourcing

All raw materials are sourced responsibly with fibers, chemicals and other raw materials being certified and/or approved by legislation. Furthermore, we only procure from suppliers that endorse our high standards of societal and environmental responsibility.

Efficient production

During our manufacturing processes, we steadily optimize the use of resources, such as energy, heat, water and raw materials. We invest in energy conservation and renewable energy, which will result in reduced greenhouse gas emissions from our operations.

Efficient production

Optimize processability

Our product design takes into consideration not only what happens within our factory gates, but also the processability and converting processes that come after. We have a thorough understanding of the ideal mixture of ingredients, paper production processes, coating and finishing. When everything is in perfect balance, the paper performs excellently, resulting in reduced use of resources, additional materials and colors or coatings at the converting facility.

Designed for circularity

Our technology expertise enables us to create papers from renewable sources that perform excellently and are recyclable and/or compostable. This approach provides fiber-based alternatives with an optimized product lifespan.

In 2023, we filed 51 patent applications, increasing our total patent portfolio to 633 patents and patent applications, of which nearly 73% have been granted already. All patents granted and in force at the end of the reporting period amounted to 335.

Legislation & regulatory

Countries around the world are setting climate targets and implementing programs to advance the circular economy. The result is evolving legislation and regulatory frameworks. The challenge is a lack of harmonization across countries and regions, as well as constantly evolving regulations.

In addition, several of our product solutions, such as those for the food and tobacco industries, are subject to extensive and strict regulations regarding food contact, consumer health and safety. At delfort, a team of regulatory experts monitors the rapidly changing environment, anticipates changes, and communicates regularly with product management to ensure that our solutions are in strict compliance with regulations and applicable laws.

Our sites are certified according to international standards such as ISO. Our products comply with regulations from the German Advisory Body BfR (Bundesinstitut für Risikobewertung), FDA (U.S. Food and Drug Administration) and the EU TPD (European Union Tobacco Products Directive) regulations where applicable. Additionally, our products undergo assessment by independent testing institutes for recyclability, compostability, food safety and more (→ Certifications).

PFAS-free food packaging

As a leading manufacturer of specialty papers, we have taken on the challenge of developing and producing sustainable packaging papers that are free of engineered perfluorinated and polyfluorinated chemicals (PFAS/PFC). In recent years, we have established our own and independent research facilities to promote the research and development of PFAS alternatives. In addition, we have initiated several collaborations with universities and many with customers. Our R&D investments have enabled us to offer PFAS-free papers on an industrial scale that are perfect for food wrapping and packaging.
We prioritize energy transition, innovation and circularity to lead a sig-
ificant shift within our industry. Our primary objective is to contribute to
solving the challenges at hand by setting clear decarbonization goals.

Our roadmap to net zero
Our goal is to create and implement a comprehensive decarbonization
roadmap that not only aligns with our customers’ sustainability require-
ments, but also remains economically feasible. To accomplish this goal,
we must consider various dynamic factors that may arise in the future and
affect our decarbonization strategy. These factors include changes in our
product portfolio based on customer needs, the security of energy and
water supply, geopolitical uncertainties, regulatory demands, advances in
product and technology and the effects of climate change, among others.
To prepare for an uncertain future, we use scenario planning to analyze
various potential outcomes and to adapt quickly to changing circumstanc-
es and customer needs. Our decarbonization corridor for Scope 1 and 2 –
delfort’s climate care program – has been agreed with all decision makers
and customer needs. Our decarbonization corridor for Scope 1 and 2
includes all Scope 1, 2 and 3 GHG emissions. We signed our commitment at the beginning of 2023 and started analyzing our existing options. Based on the results of this analysis,
we have defined our short- and long-term net zero targets for Scope 1 and 2
and will submit these, along with our Scope 3 reduction targets, to SBTi
no later than the end of this year.

CDP
We have been recognized by the global environmental non-profit organi-
zation CDP in all three categories with the very good rating of B/B- for our
management in corporate transparency and environmental performance.
We received a B rating in forests, and a B- rating in climate change and water
security. CDP evaluates companies on a scale from A to D based on
the comprehensiveness of disclosure, awareness and management of en-
vironmental risks.
The ratings demonstrate our commitment to environmental responsibility
and sustainability. The results indicate a significant level of transparency,
and that we actively manage all three areas.

Plan, do, check, act
To ensure continuous improvement, we break down long-term goal-setting
into site-specific objectives on an annual basis. Subsequently, each site de-
velops and implements an action plan for environmental projects.
We conduct ongoing monitoring of heat, water and electricity figures, as
well as related GHG emission reduction progress, through monthly reviews
by the Corporate Manufacturing and Technical Affairs (CMTA) team and
quarterly steering meetings with managing directors. During quarterly man-
agement result reviews with the board of directors, managing directors re-
port on progress and discuss any deviations, initiating countermeasures as
needed. In addition, the corporate energy manager, energy experts from
each site, and the energy lead buyer meet once a month to discuss actual
energy consumption, share best practices, and enforce efficiency measures
and cost reductions organization-wide.
This approach allows us to identify and effectively address current and po-
tential negative impacts, as well as opportunities.

Managing our decarbonization roadmap (Scope 1 and 2)
Our roadmap has three priorities of action:

• Real-time monitoring to measure, control and optimize the consumption of heat, pressurized air, electricity and water
• Using Best Available Technologies (BAT)
• Deriving ideas for efficiency projects by best practice sharing throughout the group and external technology scouting

Efficient energy generation on-site
• Decarbonization of our own energy generation by the introduction of hybrid and multi-fuel boilers
• Improvements in heat & power systems including the potential use of hydrogen in the long term
• Continuous analysis of possibilities for investments in renewable electric and heat energy generation facilities on-site (e.g. PV plants, hydropower, etc.)

Energy saving initiatives
• Purchasing carbon-neutral/renewable electricity
• Striving for long-term partnerships and contracts with electricity suppliers (PPA)
Corporate and Product Carbon Footprint (CCF, PCF)

In our last CSR report, we disclosed, for the first time, Scope 1 and 2 GHG emissions categorized under the distinct technology platforms (paper production and printing), alongside one consolidated figure for the entire organization. This serves as the baseline for our decarbonization strategy. In addition, we started with the calculation of our Scope 3 emissions.

In a first step, to understand our impact in terms of Scope 3 emissions, we conducted a materiality analysis for all 15 Scope 3 categories with a reputable external consultant using a spend-based approach. This analysis shows the Scope 3 categories that contribute the most to our GHG inventory: purchased goods and services, upstream transportation and distribution, as well as fuel and energy-related emissions. This indicates the materiality of the different Scope 3 categories, but does not provide a complete picture of the Scope 3 GHG emissions of our business areas.

Therefore, we collected the activity data for purchased goods throughout the group in their original units (kg or pieces of material), as well as the necessary conversion factors from our suppliers to convert the data to the target unit (activity-based approach).

We continued to engage our suppliers to provide GHG footprint data to improve the data quality and accuracy of our Scope 3 emissions figures, and to decrease the proportion of secondary data (which is obtained from databases such as Ecoinvent or other reliable sources) for our calculations. In the second quarter of 2024, we will validate the calculation of all Scope 3 categories for 2023 using a mixed approach of activity-based and spend-based data (see graph on the left). The planned validation and certification of the calculation model ensures the correctness of our base year emissions and serves as the basis for automatic calculations in the future.

Our next step is to support our customers with the Product Carbon Footprint declaration for our products. For the activity-based and certified Corporate Carbon Footprint of all scopes (especially Scope 3, including its decarbonization roadmap), we expect to report detailed figures (together with the SBTi targets that will include Scope 3) in the next CSR report.

Carbon pricing

To better plan our low-carbon investments across the group, we apply an internal shadow carbon price that is aligned to the price of allowances in an emissions trading scheme. This approach assists in identifying and seizing low-carbon opportunities and in anticipating stakeholder expectations. The shadow price is used in various decision-making processes, including capital expenditure, operations, risk management, opportunity management and long-term strategy. It also enables us to prepare for potential future carbon taxes in the different countries we operate. All energy investments and efficiency projects are evaluated based on their potential for energy savings, reduction of CO2 emissions, water conservation and reduction of fiber loss.
In 2023, we continued to advance our climate care program and associated net zero goal. Many of our CAPEX investments include energy efficiency projects directly linked to GHG emission savings. Most of these are long-term projects, and in 2023 we began planning for them primarily as follows:

- Convening a global meeting of energy experts and operations managers from each site to develop detailed measures for energy conservation and decarbonization.
- Using big data software in our European mills to measure the consumption of heat, electricity, pressurized air and water in real-time directly at the machine.
- Minimizing consumption during standstill periods.
- Installation of decarbonization measures for one defiort site (accounts for approx. 20% of group-wide Scope 1 and 2 emissions compared to our new SBTi baseline year 2023) to enable its decarbonization for Scope 1 and 2 emissions by 2026.
- Preparing boiler houses for burning alternative and biological fuel sources at three paper mills.
- Planning of PV plants for several paper mills and printing sites.
- Negotiating and contracting Power Purchase Agreements (PPA).

### Energy consumption

In 2019, we set a goal to achieve by 2030 to improve our energy efficiency by more than 15% per 1,000m² of net saleable paper against baseline 2016 for the paper technology platform. We break down our reporting into the thermal energy and electricity consumption of our paper mills.

In 2023, we achieved a 7.2% reduction in thermal energy consumption per 1,000m² of net saleable paper compared to our 2016 baseline. The electricity consumption figures for the paper mills indicate a 15% increase per 1,000m² of net saleable paper compared to the 2016 baseline. The increase in specific values can be attributed to a reduction in paper production, resulting in a lower output of -13.4% compared to the previous year. During non-production periods, we allocated time to maintenance and cleaning tasks, which required the use of energy and water resources. In 2023, we analyzed downtime to identify measures for minimizing water, electricity, compressed air and wastewater usage during periods of interruptions. In addition, we diversified our portfolio mix by conducting paper trials during downtimes, which do not result in saleable paper. The initiation of machine rebuilds and modernizations also contributed to higher energy consumption during the start-up phase.

### GHG Emissions

We report the absolute and specific GHG emissions for Scope 1 and 2 separately for the paper and printing technology platforms, as well as the total emissions for the entire Defoort organization. We report separately because the two technology platforms are based on different production processes and have different end products. This approach provides a deeper level of insight than just a combined number for the entire organization.

Back in 2019, we set ourselves a target to achieve by 2030 to reduce our GHG emissions by more than 20% per 1,000m² of net saleable paper against baseline 2016 for the paper technology platform. Historically, 2016 was a successful year with very low specific consumption, and we wanted to set ambitious targets. However, this target is only the first step of our journey, as we plan to replace it once we have calculated and verified our SBTi targets.

In 2023, the absolute GHG emissions and GHG emission intensity for the paper technology platform increased compared to our 2016 baseline due to various reasons. In the past, one of our facilities sourced carbon-neutral steam from an external organization. This energy source became unavailable in 2023, resulting in increased emissions. Additionally, at another site, there was a change in the supplier mix for the available energy source. In 2023, economic challenges led to reduced production at most of our paper and printing sites. Standstill and smaller order volumes per contract caused a relatively high number of necessary grade changes. As a consequence, more cleaning was required, particularly at the paper machines, leading to increased water and energy consumption and higher GHG emissions. The proportion of CO₂-free purchased electricity in 2023 was 38%. Our onsite renewable electricity generation amounted to 7%.

**Air emissions**

We only disclose information about the quantity and specific release of NOₓ emissions into the environment. Data on other air emissions is not significant. At present, NOₓ emissions data is only available for the paper technology platform. Printing technology platform figures are not yet included in our reporting system. In 2023, we achieved a -4.7% reduction of NOₓ emissions per 1,000m² of net saleable paper compared to our 2016 baseline. This downward trend reflects the continuous efficiency improvements within the group and use of the Best Available Technologies for energy generation on-site.

safety

At défors, we are committed to using water efficiently and responsibly. Our goal for 2030 is to reduce our freshwater withdrawal by over 20% per 1,000 m³ of net saleable paper compared to our 2016 baseline. To achieve this goal, we have developed a water stewardship strategy that focuses on closing cycles through water recycling and reuse, minimizing environmental impact through continuous water-saving measures and improving wastewater treatment. We apply a systematic approach to risk assessment, risk management, as well as monitoring and improving our water withdrawal, consumption and discharge.

We use water in various applications such as process water, cooling water and freshwater for boiler houses. While water is essential for the paper production, it is only used for cooling purposes and personal hygiene in the converting operations. The production of high-quality specialty paper requires pure water, resulting in biological and physical limitations for the closure of water circles in the mills. Depending on the mix and applications, water consumption for specialty papers is commonly higher than in the production of commodity paper grades. Our continuous investments into efficiency improvements, smart water technology and process optimization will support us to further reduce our water withdrawal.

Water withdrawal

We apply the WRI Aqueduct Water Risk Framework to determine water risk at each of our production sites. Few of our sites – located in catchments of potential water stress – have developed a water stewardship strategy that focuses on closing cycles through water recycling and reuse, minimizing environmental impact through continuous water-saving measures and improving wastewater treatment. We apply a systematic approach to risk assessment, risk management, as well as monitoring and improving our water withdrawal, consumption and discharge.

We withdraw water from the surface (55%) or from groundwater (41%), via our own wells. A minor volume (4%) is supplied by a third party. In comparison to papermaking, the water consumption per unit of production is minimal, and only water supplied by the municipal network is used. In 2022, additional wells were drilled at one of our sites to reduce surface water withdrawal. Further well drills are planned at this site for 2024. One advantage of using well water is that it is typically cooler than surface water, resulting in a higher cooling capacity with less freshwater withdrawal. This, in turn, reduces the electricity consumption of the pumps. At one site, we performed a very detailed analysis of the water circuits and adjusted the settings of the controls to reduce the overflow of warm water into the drain and thus the withdrawal of freshwater. In addition to water savings, this results in lower energy consumption and higher process water temperatures.

In 2023, the specific water withdrawal per 1,000 m³ of net saleable paper reported by the paper technology platform increased by 1.2% compared to our 2016 baseline. Compared to 2022, the specific value increased by 2.6%. There are two main reasons for the increase in absolute and specific water consumption volumes: We carried out two major rebuilds of paper machines; the testing phases of new paper grades require higher water consumption per unit of production. In 2022, we improved compared to the high levels in 2020 and 2021. However, the actual consumption value has not fully recovered yet. In 2023, economic challenges caused reduced production at most of our paper and printing sites. In addition to standstills, smaller order volumes per contract resulted in a relatively high number of necessary grade changes on our paper machines. Therefore, more cleaning was necessary, which also led to increased water and energy consumption.

Water consumption

Water for specialty paper production is mainly used for two purposes – processing our raw materials and cooling. Our water consumption mainly corresponds to the volume of water that evaporates in the drying section of our paper machines and processes. We separate water circuits to reduce freshwater withdrawal. The heat from cooling water is recovered for internal processes, and the water is returned unchanged to the environment. The water content of the products that leave our mills varies according to the equilibrium state of external conditions but is between five to seven percent. The difference between water withdrawal and water discharge also depends on the variability of incoming products and their water content.

Water discharge

Sustainable specialty paper production is subject to strict criteria, above all regarding wastewater and water treatment. National or regional legislation, as well as industry standards and certification systems (such as ISO 14001, IPPC Integrated Pollution Prevention and Control) identify particularly problematic substances and provide guidelines on how to reduce emissions and avoid harmful effects on water. We manage water quality by employing state-of-the-art water treatment technologies in line with national laws and requirements.

Wastewater that is purified before discharge is primarily generated from stock cleaning after machine downtime (standstill) or grade changes, process water and white water from wire and felt cleaning.

We have on-site tertiary wastewater treatment plants at four out of six paper mills and one primary treatment plant, all of which adhere to the highest environmental standards. At the primary effluent treatment plant, we treat discharges and monitor their water quality before sending them to a tertiary wastewater treatment plant locally treated wastewater to a local water treatment plant under municipal discharge permits. Primary treatment involves pH adjustment, flocculation, sedimentation and filtration of water. Final wastewater treatment for one paper mill is contracted out to third parties.

The tertiary effluent treatment plants remove impurities, such as nitrogen and phosphorus, as well as other dissolved inorganic substances, through coagulation, sedimentation, activated carbon adsorption and ion exchange methods. This process allows the water to be safely released back into the environment.

The wastewater from our converting sites is discharged to municipal wastewater treatment plants. As no process water is required at these sites, the wastewater does not require any special treatment before it is discharged to a municipal wastewater treatment plant. Most of the discharged water is released as freshwater to the surface (e.g. rivers). 14% of our wastewater discharge requires no treatment and can be directly released back into the environment. 68% is treated on-site in our wastewater treatment plants.

4 The method of calculating water withdrawal for the paper technology platform follows GRI guidelines.

5 All water discharged from our papermills needs to comply with statutory emission limits with regard to the standard effluent parameters, which are mainly based on discharge mass balances. delfort monitors water quality data for all discharges from all paper technology platforms and aquatic systems regularly. The differences between water withdrawal and discharge figures can also be explained by the variability in the equilibrium state of external conditions but is between five to seven percent. The variation between water withdrawal and discharge figures can also be explained by the variability in the equilibrium state of external conditions but is between five to seven percent.

We regularly monitor wastewater quality parameters based on water mass balances available at each site. Key parameters, such as pH value and temperature, are continuously measured. Automatic water sampling ensures daily analyses of parameters such as chemical oxygen demand (COD), solid content and 5-day biological oxygen demand (BOD).

We adopt a precautionary approach and prepare for potential incidents through emergency plans that are easily accessible to all employees. These comprise precise procedures in the event of water contamination and corresponding instructions for action. Additional buffer tanks or ponds protect against the discharge of wastewater into the sewer system or the environment. There were no incidents of water contamination in 2023.

5 Water consumption corresponds to the volume of water that evaporates during paper production, including the volume of water withdrawn for the storage of raw material and the evaporation of water during chemical processes. The volume of water consumed is measured. Automatic water sampling ensures daily analyses of parameters such as chemical oxygen demand (COD), solid content and 5-day biological oxygen demand (BOD). 

6 Water consumption corresponds to the volume of water that evaporates during paper production, including the volume of water withdrawn for the storage of raw material and the evaporation of water during chemical processes. The volume of water consumed is measured. Automatic water sampling ensures daily analyses of parameters such as chemical oxygen demand (COD), solid content and 5-day biological oxygen demand (BOD).
The health and safety of all white- and blue-collar employees, as well as apprentices, external temporary staff and service suppliers, has highest priority within delfort. This applies in the workplace, when working from home, during business trips and in all other situations where work is performed. Our ultimate goal is no accidents at all (Goal Zero).

We manage our goal with the help of our occupational health and safety management system. This is a global, uniform guidelines and processes relating to risk prevention, leadership culture, effective communication and risk management according to ISO 45001.

Since the company was established in 2006, there have been no fatalities. An accident occurred for over 1,000 days. As of the end of 2023, the site with the highest number of hours worked in 2023, compared to 2022. At seven of our sites, no accident occurred during the entire 2023 reporting period. At two of our sites, no accident occurred for over 1,000 days. As of the end of 2023, the sites with the best safety record had gone 1,000 days without any accidents.

Hazard identification
We monitor and record all incidents, including safety observations, near misses and injuries. Reporting via incident flash reports is mandatory for all employees. We publish these reports on the intranet and share them in regular team meetings and discussions, to learn from others’ experiences. Employees may also report health and safety risks confidentially via safety trust persons, who have been appointed at all sites. In addition, we use our daily Go & See meetings to make co-workers aware of sources of risk and danger so that necessary precautions can be taken. Safety engineers and supervisors regularly evaluate workplaces together with employees to ensure a safe and healthy working environment. All heads of department analyze and follow up any observations. Corrective action is taken to prevent recurrence. Learnings are shared via global and work health and safety team in monthly meetings. Employees and contractors must follow our occupational health and safety principles and have the right to leave a working environment if they believe that it could cause injury or sickness.

Global safety network
100% of our employees, as well as workers who are not directly employed by delfort, whose work and/or workplace is controlled by us, are covered by our occupational health and safety management system, which is regularly audited internally. In addition, seven of our sites are certified according to ISO 45001 and are regularly audited externally. Each manager is responsible for occupational safety in the area under their supervision. In addition, all of our sites have dedicated work safety managers and safety trust persons. All employees are represented in formal, joint management-worker health and safety committees and at regular European Works Council meetings.

Our global occupational health and safety team meets virtually once a month to share, learn and evolve our health and safety practices. In addition, the team holds an annual meeting on global health and safety at one of our sites, rotating the location each year. During this meeting, one agenda item is to conduct a site audit and present the results for discussion with the managing directors.

Participation and communication
We engage our workforce in the development, implementation and execution of appropriates management systems and programs and apply the same precautionary approach to all subcontractors working on our sites. For preventive protection, delfort provides its employees with the required personal protective equipment free of charge, depending on the work assignment. Every year, the sites conduct several local work safety assessments with the full involvement of the local general and first-level managers.

Another important aspect is our Safety Awareness Talks (SATs), which have already been implemented on all of our sites. These are 5 to 10-minute discussions between nominated work safety coaches and employees, regardless of their department and location. The SATs aim to raise awareness of risks through face-to-face discussions, in which safety measures are shared. Over the last few years, we have been able to steadily increase the number of SATs that have taken place. In 2023, we reached an average of 378 SATs per 1,000 employees. As we have already achieved our first goal to implement SATs for 15% of our employees, we aim to achieve an average of 500 Safety Awareness Talks per 1,000 employees per month.

In the group-wide digital news channel, occupational safety managers keep the organization informed when a team or site has achieved a specific number of accident-free days, months or years.

Health and safety awareness
During the reporting period, the work safety team, with the support of the managing directors, conducted safety culture perception surveys among employees at two of our sites to gather insights regarding possible weaknesses.

Every two years, we develop and implement group-wide health and safety campaigns. In 2023, the Life Saving Rules campaign was completed, while a new one – Safe Together – has been developed. It is also planned to last for two years and consists of eight topics, each of which will run for three months. The campaign aims to ensure that each employee maintains sustainable awareness of health and safety.

Also, training is mandatory for all employees and offered in a variety of formats, including e-learning courses and on-the-job sessions. Workers who are not directly employed by delfort are informed about possible risks and hazards via safety instructions before they start working. Every new delfort employee is trained on safety instructions during the onboarding. In 2023, we continued the e-learning training on work safety for all employees. 6,200 assigned participants successfully completed these work safety trainings. Additionally, local on-site training is organized based on the requirements of each location.

Work safety leadership program
We provide occupational health and safety training to individual workers and employees, as well as all subcontractors working on our sites. In close cooperation with all delfort sites, we have developed a tailor-made training program for operational leaders. Targeted awareness raising is important so that leaders can optimally serve as role models. Before the training program is rolled out to the group, we are launching a pilot phase in spring 2024 with two of our sites (88 operational leaders) to measure the impact and optimize content, if necessary. A workshop in December 2023 served to prepare everybody involved.

Promotion of employee health
Promoting employee health is important to us, even outside of work. To this end, we offer a wide range of medical and health services, such as on-site doctors, psychiatrists and psychologists consultations, free medical check-ups and vaccinations. In addition, we offer voluntary health promotion programs such as sponsored fitness classes, nutrition counseling and group events.

Our occupational health services respect an employee’s right to privacy. delfort will not use an employee’s participation in such services and related health records as a criterion in making employment or hiring decisions, including termination, demotion, promotion or offer of employment, compensation, or other favorable or unfavorable treatment. There have been no reported or confirmed cases of work-related illness since the company was founded in 2006.

fair employment

Led by the principles of human rights, we aim to provide our employees fair, equal and rewarding employment opportunities. We prioritize trust-based relationships, fair compensation, and talent retention beyond compliance with ethical and legal standards.

Personal development reviews

We ensure a culture of open feedback between employees and managers. As a central tool for promoting appreciative and supportive collaboration, we have introduced the Let’s Talk annual personal development review. Our goal is to install our annual development review process on all sites no later than 2030 and provide all employees access to annual development reviews. By 2023, Let’s Talk was implemented in ten of our 13 sites worldwide and 65% of all delfort employees completed at least one Let’s Talk session. As a central tool for promoting appreciative and supportive collaboration, we ensure a culture of open feedback between employees and managers.

The concept includes a performance appraisal, feedback from the employee’s manager and, vice versa, the identification of the employee’s training needs and the planning of development measures. delfort aims to support employees in their performance and development within a culture of continuous improvement, aligning personal goals with those of the company so that both – individuals and the company as a whole – will benefit. We look forward to rolling out the program to further sites over the coming years, making annual Let’s Talk reviews accessible to every employee.

Managers work through a structured form in the review, allowing them to concentrate on discussing competencies, personality, strengths and development. Supervisors are trained on how to use the Let’s Talk form and how to provide constructive feedback. Employees are able to access the Let’s Talk form on delfort’s intranet. To increase the number of Let’s Talk reviews, managers are actively encouraged to conduct them. Likewise, delfort sites are required to report the number of Let’s Talk reviews conducted on a quarterly basis.

We look forward to rolling out the program to further sites over the coming years, making annual Let’s Talk reviews accessible to every employee. Wherever possible, we offer our employees individual and flexible working arrangements, ranging from part-time employment to remote working options. Based on local legal frameworks, we provide our employees with life-phase-oriented working conditions and balanced shift models.

delfort employees 2023

Employment figures across delfort sites remained stable with no significant changes in the number of employees, turnover or staff structure. New hires for the year totaled 232, compared to 279 exits, resulting in a year-end headcount of 3,221. 97% of our staff are full-time employees. 21% of our workforce are female, 79% are male. All figures reflect the composition of our entire workforce, from specialty paper production and converting to general administration and management.

Employees and turnover reflect the number of employees leaving the company, with the exception of those leaving on retirement. Structured data collection throughout the group is currently not available for gender identity other than female and male.
Respecting human rights

We are committed to behaving in a fair manner and respecting the fundamental human rights of all people within our company, across our supply chains and in the communities in which we operate. Our principles are stated in our company policies, reflecting our high standards regarding human rights topics such as child, forced or compulsory labor, non-discrimination, the rights of indigenous people, diversity and equal opportunity, as well as occupational health and safety. Whenever an incident occurs, delfort’s top management responds immediately with appropriate action. In 2023, no incidents were reported on our sites in Europe, North America, Mexico, Vietnam, China or Malaysia, nor did any of our monitored suppliers report any incidents. If employees identify a violation, they can report it to their supervisor, the legal department, or anonymously via the whistleblower hotline.

Human Rights Performance Assessment

In 2023, we implemented an annual Human Rights Performance Assessment that covers both our own operations and our supply chain. The aim of this assessment is to discuss any incidents, risks or impacts regarding labor and human rights, or topics that might have been reported through our whistleblower channels, to track our performance, agree on appropriate measures to minimize risks, decide on future targets and on training initiatives. The assessment also serves to review and update the related policies. In 2023, minor amendments were discussed and two policies will be reviewed and improved in 2024. The Human Rights Performance Assessment involves the board of directors, dedicated managers from the HR, purchasing, ESG & regulatory and legal departments.

Parental leave

We are particularly committed to ensuring that employees of all genders have the opportunity to take parental leave in compliance with local labor laws. We maintain communication with our staff throughout their parental leave and plan their return to work, including working hours, tasks and responsibilities, together in good time. We offer them individual flexible or part-time opportunities based on local legal regulations. This structured process is also supported by reintegration training.

Compensation and benefits

We offer fair compensation and benefits that both meet the individual needs of our employees in every phase of their life and are in line with the legal framework, local conditions and needs of our international locations. We offer part-time and full-time employees the same opportunities and benefits, including:

- healthcare support, e.g. doctors, psychologists, free medical check-ups, vaccinations
- Think Healthy program: healthcare program containing more than 400 customized activities, such as sponsored health checks and free fitness classes
- the delfort emergency fund, which was set up by delfort’s owners to financially support employees in exceptional situations, when these are insufficiently covered by insurance, e.g. family emergencies, accidents, sudden illness affecting employees and their families
- in-house canteens, meal allowances, free fruit baskets
- events and activities, e.g. family days and team sport events
- delfort kids club to support parents during the school holidays
- holiday gifts for employees
- coupons and discounts in local stores
- modern working equipment and safe workplaces
- company pension plans

developing talents

Our culture is characterized by strong motivation and high performance, so that everyone can develop and fully utilize their strengths. We believe that having the right employee with the right qualifications in the right position will ensure our competitiveness in the long-term. Our internal education, development and training process allows us to manage the development of our employees in a consistent manner throughout their careers with delfort, providing equal access to education and training for all.

We aim to implement a group-wide, tailor-made training program that will be reviewed and adjusted as necessary on a regular basis, but at least every two years. The delfort training program supports employees, helping them grow in their current position and to expand their potential for future roles. Our employee development initiatives comprise local and global training programs such as modular management trainings, lean trainings or project management workshops, customized coaching plans and internal vertical and lateral career opportunities. As part of our talent development program, we encourage the promotion of internal, skilled employees.

Training programs
In 2023, our employees collectively completed a total of 52,000 hours of training worldwide (16 hours/employee). Our HR team defines a number of core courses that, due to their importance, are permanently available. The majority of these are e-learning courses, a brief example of which includes:
- work safety (6,200 sessions completed in 2023)
- environment (390 sessions completed in 2023)
- Paper making for non-paper makers – completed by 38 employees
- IT security training (180 sessions completed in 2023)
- Project management training comprising five different modules – completed by 45 employees

In 2023, we reviewed our Driving for Excellence program. It is a group-wide management training and covers topics like business management, self organization, leading others and leading oneself. It consists of different modules, typically lasts for 10 months per edition and includes individual coaching. Network meetings with former participants ensure constant sharing of experiences, strengthening and growing management skills to meet the needs of our customers in the best possible way. We plan the launch of the next international training group to take place in 2024.

In 2023, we launched additional local leadership programs at two sites. Our project management training courses have been reviewed and adjusted in 2023. We conducted the preparation phase for a new delfort safety leadership training at two sites in 2023 and will start with pilot trainings in 2024.

We have also developed a printing training edition to complement the internal business and paper making training offered annually. These trainings are designed to give all delfort employees a professional insight into the production and printing of our specialty papers, making them true industry experts.

Apprentices and interns
We attach great importance to training young people to become excellent professionals. We offer apprenticeships for both blue collar and white collar professions at our Austrian and German sites and have taken on 11 new apprentices in 2023. There are currently 25 apprentices at delfort. In 2023, all delfort apprentices who had completed their training became permanent employees.

In addition, we maintain close cooperation with schools and universities, support young students in gaining experience and attract future employees through internship programs.

Onboarding
We use a structured onboarding process at all locations to support new employees from the start of their employment. New employees receive all relevant information and contacts on their first day at work. They are informed about group-wide processes and guidelines, with a focus on health and safety.

Transition assistance, exits and knowledge transfer
At delfort, we use clearly defined exit and outplacement processes in compliance with applicable laws and regulations, as well as inherent succession planning and knowledge transfer. We offer transition assistance programs to help employees who are retiring, whose employment has been terminated, or who can no longer perform their current job. In the latter case, we try to find alternative employment opportunities within the company and provide the employee with retraining. In certain cases of termination of employment, delfort offers job placement services conducted by external consultants to assist the employee. In accordance with local laws, terminated employees receive severance pay based on age and years of service. Employees approaching retirement are prepared and supported through long-term planning. As part of our transition assistance program, we conduct succession planning and knowledge transfer to retain skills and expertise within the company and ensure that a written record of valuable information exists. This leads to improved performance and innovation and is available for all key positions within the company. Once a year, the process is reviewed by the HR department and considers the team structure, future requirements, capacities, competencies and opportunities for personal development.

During annual development reviews, the manager and employee discuss possible succession scenarios and identify training needs. In the event of an employee entering retirement, the manager plans sufficient time for a handover. All employees leaving the company attend an exit interview as part of the leaving and outplacement process so that delfort can use feedback to put any necessary improvements in place.
company governance

As a family-owned company with headquarters at the heart of Europe and sites around the world, we pursue the strictest corporate governance standards, which ensures a resilient, safe organization.

Our owners and management team strive to create value for our employees, customers and business partners, as well as for the communities in which we operate. Adopting corporate governance best practices improves competitiveness, sustainability and operational performance and company reputation, while reducing operational risk and strategic hazards.

Governance structure

Our dual management system consists of a Supervisory Board and a Board of Directors. Both constitute the company’s highest governance body. It is important to the owners that the governance structure is built on long-term remuneration of responsible persons and trustful relationships between the members of the boards.

delfort’s Supervisory Board is composed of four representatives of the shareholders – one of the latter who is appointed as chair of the supervisory board – and two members of delfort’s Works Council. None of these board members are executive managers at delfort. All members of the supervisory board and board of directors are male. They are not members of an under-represented social group. All board members are politically unbiased. They attend legally mandatory as well as voluntary trainings which ensure that they have the necessary professional knowledge, personal characteristics and experience to perform the duties associated with their position.

The supervisory board nominates the board members as required, and according to the maturity of their contracts. Factors related to diversity do not apply for operational risk coverage and a wide scope for strategic risk coverage.

Managing CSR

Sustainability is a strategic focus within delfort and for its owners. Clearly defined roles and responsibilities ensure effective sustainability management throughout our organization. The supervisory board appoints the board of directors to independently manage delfort with the aim of creating sustainable value, determining our strategic orientation – including sustainability – and ensuring its implementation. The board of directors bears the primary responsibility for our sustainability strategy and is ultimately accountable for its success.

In association with the board of directors, the head of ESG & Regulatory connects and coordinates four major management teams and steers all sustainability resources to drive forward and implement delfort’s CSR strategy: the Corporate CSR Committee, the Managing Directors, the SBA Heads and the CSR Business Team. (Please refer to our Organizational Chart for more information on our sustainability governance.)

CSR coordinators on all sites support the implementation of CSR improvement measures and serve as dedicated contacts for business partners who have queries regarding sustainability issues. Employees help to integrate sustainability into our daily business activities. The supervisory board and the board of directors meet four times a year to align on strategic and operational tasks and to monitor performance against targets. The board of directors consists of Martin Zahlbruckner (CEO), since 2006, Roland Pahls, (CFO and COO), since 2007, who retires from his function as of June 30th, 2024, Christoph Steger (CSO), since 2023, as well as Hannes Kainz (CDO) and Ilka Saarinen (CFO), who both joined the board of directors as of 1st of January 2024.

These directors manage the company with a strategy focused on long-term success and are, together with their executive teams, responsible for the management of its impact on the economy, the environment and mankind.

Risk management

To fully comprehend the impact of the company (inside-out) and to the company (outside-in), including the impacts relating to ESG topics, we employ a systematic risk management approach to safeguard the group and our business partners.

The board of directors, along with the corporate directors, assume significant management and control responsibilities as part of a group-wide central control system. They ensure that risks are managed within specific indicators, including tolerance thresholds, and monitor that risks are kept within established levels.

In our risk management approach, we distinguish between a narrow scope for operational risk coverage and a wide scope for strategic risk coverage. Timely identification, evaluation and response to those risks are essential management activities.

Our risk management is based on a uniform, group-wide reporting system conducted on a monthly basis for operational risks. For strategic risks, we conduct a risk workshop at least once a year to evaluate the risk landscape of delfort from a 360-degree perspective beyond our operational risk management. After reviewing the workshop results, appropriate actions will be taken. These actions may include implementing necessary and adequate business continuity policies, standards, guidelines or plans, or appointing new risk committees for specific risk areas.

As part of our risk management strategy, we prioritize ESG-related topics. The corporate directors continuously monitor upcoming legislation, regulations and laws from countries where we operate and conduct business. They also regularly exchange information with associations, environmental groups, and non-profit organizations to stay informed about ESG developments. This information and experience is brought to the attention of the board of directors and shared throughout the executive level of the company.

The following pages provide a summary of the risks that are most relevant to our business at this time and how we manage them.
Climate change can impact our business in various ways such as water scarcity, water pollution, high temperatures, hurricanes, floods, fire risks, as well as changes to vegetation boundaries and growing conditions. This could cause increased disruption to our supply chain and manufacturing, and it could result in increased costs, reduced profit and reduced growth.

Economy
delfort's earnings are affected by economic developments, cost variations, default in payment, currencies, interests and changes in sales volumes. This can have impact on the company's financial position.

Geopolitical uncertainty
delfort operates around the world and is exposed to economic and political instability. The global economy was particularly affected by the Ukraine and Middle East conflicts in 2023. Unfortunately, we have to expect that these will continue for some time. These conflicts may further increase energy and raw material prices, affect sales and the supply chain, and those may impact the future competitiveness of our operations.

Risk management

Climate change
• Monitoring government policy and actions to combat climate change and taking proactive actions to be able to rapidly comply with these policies
• Reducing delfort's own GHG emissions, energy and water consumption by implementing the delfort climate care program
• Monitoring raw material trends to help customers master the transition from fossil-based materials to renewable materials
• Supplier Code of Conduct, supplier risk evaluation and supplier performance evaluation to prevent negative social and environmental impacts along the supply chain

delfort's earnings are affected by economic developments, cost variations, default in payment, currencies, interests and changes in sales volumes. This can have impact on the company's financial position.

Geopolitical uncertainty
delfort operates around the world and is exposed to economic and political instability. The global economy was particularly affected by the Ukraine and Middle East conflicts in 2023. Unfortunately, we have to expect that these will continue for some time. These conflicts may further increase energy and raw material prices, affect sales and the supply chain, and those may impact the future competitiveness of our operations.

Cybersecurity
Cyberattacks in the form of system disruptions, loss of information and intellectual property (IP), ransomware and malicious software could potentially have major consequences in terms of costs and availability of services and products.

Talents
A skilled workforce is essential for the continued success of our business. There are several risks we are dealing with, such as a high level of competition for a limited talent pool, an evident skill gap in the general workforce, and the well-being of our employees could be affected.

Health & Safety
The delfort work environment includes shift work, high temperature and other industry-typical conditions.

Legal & Regulatory
delfort is subject to national and regional laws and regulations in diverse areas such as corporate governance, employment, taxes, product safety, product claims, patents and issues on the environment.

- 79 -
Collective knowledge of the highest governance body

We have a defined steering process and schedule in place to address and monitor topics relating to the financial context, critical risks, and opportunities. The executive management team (managing directors, corporate directors) reports to the board of directors according to a reporting calendar that is defined at the beginning of the year and ad-hoc. The board of directors evaluates the performance of the executive manage- ment team and oversees our due diligence procedure and other processes that identify and manage the organization’s impact on the economy, environment, and society. Every year, the board of directors meets to discuss the supervisory board and informs them about critical concerns, relevant risks and opportunities and proposes appropriate action. During these meetings, internal and external sustainability goals are discussed. The supervisory board reviews progress and effectiveness and approves any further action required, strategy adjustment and preliminary steps in areas that will be relevant in the future. This enables the sharing of information about sustainability developments inside and outside the company with the aim of reinforcing the collective knowledge, skills and experience of the highest governance body. The supervisory board evaluates the board of directors’ ESG performance. This independent evaluation is also reflected in annual bonus payments. Changes to the composition of the highest governance body and organizational practices have not been necessary to date in response to the evaluation of the ESG performance of the board of directors.

delfort also has a team of legal experts who monitor the rapidly changing regulatory framework and anticipate amendments. They communicate regularly with our product management to ensure that our solutions are in strict compliance with regulations and applicable laws. This is important as several of our product solutions, e.g. for the food and tobacco industries, are subject to complex regulations and strict regulations regarding food contact, customer health and safety.

Evaluation of the corporate governance framework

It is our goal to review our corporate governance framework annually to ensure continued relevance to existing and emerging issues. As part of our structured and regular reporting process, the corporate directors discuss with the board of directors whether our governance framework is up to date or if modifications are required. The need for adaptations arises, for example, from changes in national laws and regulatory requirements, adjusted processes and internal risk controlling procedures, as well as from emerging threats. All new or changed rules and procedures are subject to a specified approval process.

Remuneration

We are committed to a structured and fair performance management process and competitive remuneration packages. This commit- ment and our process are described in our internal group procedure “Compensation and Benefits”, which applies to all our sites. We aim to provide a fair and performance-related salary structure, including fixed pay and variable pay, sign-on-bonus or recruitment incentive payments, termination payments, cloutbacks and retirement benefits for mem- bers of the highest governance body and senior executives. This procedure is in line with the business strategy, sustainability agenda and long-term interests of the company and considers our risk management. Senior managers receive a fixed remuneration, which primarily reflects their professional experience and organizational responsibility. Variable remuneration packages for executives relate to performance indicators like innovation and CO2 reduction. Our remuneration packages take the opera- tional and regional environment into account. We ensure a coherent salary structure in each of our subsidiaries and throughout the company. Remuneration schemes for all employ- ees are based on country-specific collective framework conditions and are agreed with the employee in advance. Additionally, the company offers a variety of locally adapted social and fringe benefits that are in line with local market conditions (e.g., Compensation and Benefits). We review our remuneration packages and make necessary adaptations. This process includes among others: critical analysis of remuneration schemes, adaptation due to collective bargaining agreements or based on performance, determination of salary ranges for new hires, implementation or adjustment of social bene- fits, local fringe benefits and bonus programs, completely independent of gender, race, age, religion, etc.

The supervisory board and board of directors adopt and periodically review the remuneration system and have overall responsibility for overseeing its implementation. In preparation for the upcoming CSRD standards, delfort is developing a group-wide process to report the required KPIs in the future. This will help us to adapt our remuneration system in the future and to take regulatory conditions into account.

Membership associations

The delfort board members are involved in the work of industry associa- tions, such as the association of the Austrian paper industry (Austropapi- er), the Austrian Association of Pulp and Paper Chemists and Technicians (OEZERA), the Confederation of European Paper Industries (EERP), as well as the trade association within the Austrian Economic Chambers and the Upper Austrian Federal Economic Chambers. delfort benefits from the key insights and expertise that this entails.

We are also a member of numerous initiatives to network, share and pro- mote product development and the circular economy. The list below is in alphabetical order:

• 360° Foodservice – the collaborative platform for sustainable service of food and drinks in Europe
• 4evergreen – perfectly circularity together
• Book Chain Project
• Canopy – for the conservation of ancient and endangered forests
• CEFLEX – a circular economy for flexible packaging
• CELAB – toward a circular economy for labels
• Cooperation Research Result Relative to Tobacco
• Econsense - Forum for Sustainable Development of German Business
• European Rolling Paper Association (ERPA)
• FINAT - European association for the self-adhesive label industry
• Foodservice Packaging Institute
• Global Tobacco and Nicotine Forum
• GreenBlue – to advance sustainable practices
• MLPS – Medical Labels Patient Safety
• Pharmaceutical Printed Literature Association
• Sustainable Packaging Coalition
• Sustronics Consortium - Sustainable and green electronics for circular economy
• The Document X-perts Network
• The Gravure Association of the Americas, Inc.
• Tobacco Merchants Organization

Stakeholder engagement

We define our stakeholders as individuals or organizations that are directly or indirectly affected by our activities, or that may have an impact on our ability to provide products and services. We apply the category approach to identify stakeholders. This includes our customers, suppliers, regulatory authorities, government officials, non-governmental organizations or standard-setting platforms and other members of society. We are in regular contact with our stakeholders throughout the year to hear and understand their views and share our own perspectives on relevant topics, issues and challenges. We engage in constant dialogue and two-way commu- nication, e.g. during customer visits, fairs, events and meetings with local authorities. We discuss our role in society, our products and services, our business performance and other issues, taking our stakeholders’ opinions into consideration before making decisions. Communication takes place between experts within our business areas, both on a mid lev- el and discrete level, as well as at a corporate director and board level. Our stakeholders’ opinions are considered for deci- sion making, for example, during the prod- uct development process. In addition, we are in regular contact with a variety of industry...
associations, multi-stakeholder organizations, and non-profit initiatives. Due to this network, we work closely with leading companies from different sectors to develop sustainable business approaches and debate social and environmental topics at a global and local level.

**Our key stakeholders interaction**

- Regular interactions through sales and services
- Strategy and innovation workshops
- CSR assessments
- Development projects

**Employees**

- Local employee surveys
- “Let’s talk” annual personal development reviews
- Dialogue with employee representatives
- Family days

**Owners**

- Annual strategy review
- Quarterly meetings

**Suppliers**

- Regular engagement
- Compliance assessments and audits
- Supplier Code of Conduct
- Innovation workshops

**Local communities**

- Dialogue with city governments and citizens
- Corporate volunteering programs

Larger interest groups include community interest groups, media, NGOs, research institutes, scientific communities, standards bodies and organizations, governments and regulators.

2-10

**Collective bargaining agreements**

We are guided by our good working relationships with workers’ organizations. We promote freedom of association and appreciate high employee loyalty, labor peace and constructive cooperation. 79% of our employees are covered by collective bargaining agreements, all other employees are covered by individual agreements or local company agreements like at our sites in China and Malaysia that comply with the high delfort working standards.

2-15, 2-16, 2-23, 2-24, 407-1, 408-1, 409-1

**Policies and procedures**

We build our business on legally and ethically impeccable operations that comply with all applicable laws and regulations. delfort has put in place a number of firmly established policies, rules and procedures. These commitments reference international guidelines and fulfill the very high legally binding standards in the countries where our sites are located. They stipulate, for instance, conducting due diligence, applying the precautionary principle, as well as respecting human rights.

Our policies are elaborated with full involvement of and approved by the board of directors. They apply to every employee, director, senior officer or regular employee. Our policies are elaborated with full involvement of and approved by the board of directors. They apply to every employee, director, senior officer or regular employee. Our policies are elaborated with full involvement of and approved by the board of directors. They apply to every employee, director, senior officer or regular employee.

More than 88 corporate policies, rules and procedures set the standard of how we operate our business. In 2023, 8 of them have been updated and four new ones were added to ensure continued relevance to emerging issues. Selected policies are available in several languages.

**Code of Conduct**

Our Code of Conduct is based on the precautionary principle and contains binding rules on our key principles of Excellence and Sustainability, Respect and Responsibility, as well as Integrity and Transparency. It sets out a zero-tolerance policy toward bribery, fraud and other forms of corruption and is obligatory for every employee to follow. Any violations of the Code of Conduct result in the undertaking of disciplinary measures. No violations against our Code of Conduct were identified or reported in 2023. We align new policy commitments with our management policies and integrate the commitments into operational procedures, where applicable. The managing directors are responsible to ensure that all procedures are applied in day-to-day business operations.

**Supplier Code of Conduct**

We implement commitments with and through business relationships. Our pre-qualification processes and screening criteria are consistent with the expectations stipulated in our Supplier Code of Conduct. When a new supplier is approved, they are obliged to sign the Supplier Code of Conduct before starting business with us. Any violations of the Code of Conduct were identified or reported in 2023. We align new policy commitments with our management policies and integrate the commitments into operational procedures, where applicable. The managing directors are responsible to ensure that all procedures are applied in day-to-day business operations.

**Conflicts of interest**

We are committed to ensuring that all employees, including the highest governance body, avoid any activities that might lead to – or suggest – a conflict between their personal interest and the interests of the company. The policy provides guidance to employees on how they should handle any circumstances where a potential conflict of interest may arise. This includes:

- business transactions that delfort directly enters into with a member of an employee’s family or other related party
- business transactions that delfort enters into with a business partner in which a delfort employee holds participations, whether directly or indirectly (through family members or other related parties)
- business transactions with a delfort business partner which employs a delfort employee’s family member or related party as a managing director, senior officer or regular employee.

To avoid conflicts of interest, we have several mitigation measures in place. Employees are screened for conflicts of interest during the hiring process and must disclose memberships in interest groups. The employment contract stipulates that secondary employment or the establishment of one’s own company must be disclosed to the company and approved. Business conducted with related persons must also be disclosed. As part of the annual closing procedure, the managing directors must confirm that there was no conflict of interest by conducting business with related parties. If the company conducted business with related parties, the details must be disclosed. delfort employees are required to inform their line manager of any conflict or potential conflict of interest or report it via our Whistleblower policy. On a group level, potential conflicts of interest are included in the ongoing internal financial reporting procedure.

**Our policies are elaborated with full involvement of the board of directors.**
Policy to avoid bribery & corruption
We do not engage in or tolerate any form of bribery or corruption. It is the responsibility of every employee and entity within delfort to ensure that its business practices in a particular jurisdiction comply with all local requirements. Appropriate legal advice should be sought when necessary.

Monitoring compliance with this policy includes reviewing the nature and extent of payments made to or received from third parties, reviewing the assessment of bribery and corruption risks, and implementing compliance requirements such as training and certifications.

Environmental policy
We participate in the Emissions Trading System and have an environmental policy that outlines our intentions to protect public health and the environment. At delfort, we apply the precautionary principle, which aims to take preventive action despite uncertainty regarding potential damage, in order to avoid such damage from the start. We employ a systematic approach to risk assessment and risk management, including mitigation and communication. We implement our environmental policy through the ISO 14001 Environmental Management System, which is used at eleven sites. The policy is reviewed with full involvement of the board of directors and is applied to all sites and employees. The Corporate Manufacturing and Technical Affairs (CMTA) department, led by its head, is responsible for disseminating the policy to all employees within the company. They inform the managing directors, who then communicate and assign the task of integrating the policy into day-to-day business to the operational managers on-site. We distribute the information to all delfort employees through a variety of internal channels, including newsletters, the intranet, email, and meetings. Additionally, the policy is publicly available on our website. This ensures that employees at all levels act responsibly and with awareness of organizational strategies, operational policies and procedures.

Policy to secure compliance with anti-trust & competition laws
This policy is designed to ensure that the acceptance or offering of gifts and entertainment is reasonable, appropriate and, when necessary, subject to managerial approval. Our employees are required to act in the best interests of delfort and to maintain relationships with customers, suppliers and other business partners without their individual judgement being influenced by personal advantage, or without this appearing to be the case.

Policy to avoid money laundering
The purpose of this internal guideline is to inform our staff about typical risk indicators to raise their awareness about potential money-laundering activities and provide a procedure for dealing with this type of situation. delfort has a corporate due diligence process in place to ensure that employees identify business partners (“Know Your Customer” assessment) during the acquisition process, ensure the monitoring of any changes within this partnership and compile a written record of this process. We orient ourselves around the risk indicators defined by the Financial Action Task Force (FATF) as an independent inter-governmental body that develops and promotes policies to protect the global financial system against money laundering, terrorist financing and the financing of proliferation of weapons of mass destruction, and do everything to maintain zero fatalities and achieve no work-related injuries on all sites (Goal Zero).

The board of directors is supported by the departments Corporate Manufacturing and Technical Affairs as well as Corporate HR, who develop and implement group safety guidelines and actions together with the globally established Work Safety Team.

Health and safety policy
This policy is based on international standards, such as ISO 45001, and national laws to emphasize the managers’ obligation to act responsibly. It is applicable for all sites, every delfort employee, all visitors and sub-contractors on-site. To prevent accidents, we apply the precautionary principle and do everything to maintain zero fatalities and achieve no work-related injuries on all sites (Goal Zero). The board of directors is supported by the departments Corporate Manufacturing and Technical Affairs as well as Corporate HR, who develop and implement group safety guidelines and actions together with the globally established Work Safety Team.

Labor and human rights policy
We are committed to behaving in a fair manner and respecting the fundamental human rights of all people within our own company, across our supply chains and in the communities in which we operate. Our Labor and Human Rights Policy clearly defines the strictest standards to which we adhere and is based on the ten principles of the UN Global Compact. We give particular attention to delfort and third-party employees and are committed to treating all employees fairly, impartially and equally. We do not tolerate any form of child labor.

Policy to avoid forced labor
At delfort, we are committed to protecting human rights and prohibiting forced or compulsory labor. Our policy on avoidance of forced labor outlines potential risks in both our operations and supply chains and defines precautionary actions. It describes our risk assessment methods and the structured approach we take in the event of a risk being identified.

Diversity, equality and inclusion policy
In 2013, our Corporate HR department implemented a new Diversity, Equality and Inclusion Policy, and trained employees in specific positions via e-learning. This policy ensures that there is no discrimination, particularly regarding age, disability, gender reassignment, sexual orientation, marriage and civil partnership, pregnancy and maternity/paternity, race, religion or belief, nor pay and benefits, parental leave, etc. It applies to every (prospective) employee, student, contractor, volunteer, service user or supplier connected with delfort.

Whistleblower policy
Our whistleblower policy plays an important role in detecting corrupt, illegal or other undesirable conduct. We take all reports under this policy seriously. The policy describes the protection available to a person reporting a compliance concern, which matters they are able to report, how the person can report a compliance concern, who is responsible for handling the report, and what happens to the person reporting the incident. Compliance concerns may be reported either by email or through an anonymous form on the delfort intranet.

Our whistleblower policy has been developed with regard to Directive 2019/1937/EU on the protection of persons who report breaches of Union law. It has been approved by the board of directors, applies to all delfort employees and is secure business climate actions empower people company governance about delfort about this report sustainable products delfort policies & certificates
available on the intranet for all employees to access.
delfort will promptly investigate any reasonable report of compliance con-
cerns. The task of investigating the matter will be allocated based on
the nature of the issue raised and the skill-set needed to review such a matter.
If appropriate, delfort may also engage a third party to assist with the in-
vestigation process. Any third party involved will be subject to strict confi-
dentiality obligations.
If employees identify a violation, they can report it to their supervisor, the
department, or anonymously via the whistleblower hotline.
In 2023, no compliance concern relating to business integrity was reported
via the whistleblower tool.

2-27
Compliance with laws and regulations
To our best knowledge, no significant instance of non-compliance with
laws and regulations has occurred in the financial year 2023. To determine
whether an incident of non-compliance with laws and regulations qualifies
as significant, the severity of the impact resulting from the instance serves
as a basis.

2-16, 2-20, 2-26, 2-27
Critical concerns and grievance mechanisms
We enable stakeholders to raise concerns about, and seek remedy for po-
tential and actual negative impacts on them. Local management and man-
aging directors are closely linked to groups of interest and stakeholders.
Local communities, customers, partners and suppliers can address delfort
with any impacts that might occur. If customers are affected by any kind
of negative impact, our sales teams and the heads of Strategic Business
Areas are the point of contact in the event of critical concerns.
Any critical concern is immediately reported to the board of directors, and
similarly, if the board identifies any critical concern, they bring it to the at-
tention of the executive team.
If the board confirms the concern as being critical, the information is passed
on to the supervisory board.
We pursue a preventive approach to mitigating the concerns of our stake-
holders, and we are fully committed to following up on all of them. As few
concerns reach us, our strategy focuses on finding individual solutions and
remedy impacts.
However, no significant concerns or grievances were submitted to delfort
during this reporting period.
delfort encourages its employees to seek advice on implementing the organization’s policies and practices and to raise concerns
about the organization’s business conduct or any critical issues. Our Code of Conduct
clearly states that violations or potential vi-
olations shall be reported immediately to the respective direct superior, any member of the local top management or to the legal depart-
ment. Employees can also lodge complaints at worker’s unions, which are discussed with the respective managing directors. We are glad of
our very respectful relationships with workers’ unions and follow up all concerns to resolve them in the best interests of both parties.

215-1
Data privacy
It is of fundamental importance to us to pro-
tect the data of customers, suppliers and em-
ployees in the best possible way, to prevent data misuse and to be able to guarantee the protection of privacy and personal rights in
data processing.
Together with all our subsidiaries, we are fully committed to treat personal data confiden-
tially. Since the EU-GDPR came into force, a
central data protection management system
including all necessary measures has been implemented to comply with the resulting lo-
cal regulations and laws. All measures taken and processes implemented are focused on
the business customer segment (B2B). Since
2018, delfort has implemented internal rules and proce-
dures in place that oblige all employees to handle customer, supplier and employee data carefully and in accordance with current
regulations. This also regulates measures such as data protection-friendly default settings (Pri-
vacy by Default and Privacy by Design). All our employees are informed of these applicable
rules centrally via our intranet.

2018, delfort has internal rules and proce-
sures in place that oblige all employees to access
data carefully and in accordance with current
regulations. This also regulates measures such as data protection-friendly default settings (Pri-
vacy by Default and Privacy by Design). All our employees are informed of these applicable
rules centrally via our intranet.
We have established an internal data protec-
tion procedures. delfort has recorded
neither from internal, external nor regulatory bodies any data protection incidents. There
were no complaints received from any sides,
and no loss of customer, supplier or employ-
ee data since the EU GDPR came into force.
certifications

We apply independent, non-governmental, internationally recognized standards and certification schemes to ensure the quality, safety and efficiency of our products, services and systems.

- EU ETR All of our fiber procurement is evaluated in terms of compliance with the EU Timber Regulation (EUTR) standards, ensuring that our fibers originate entirely from a controlled and/or uncontroversial wood source. Next to PEFC and FSC™, our ongoing compliance with EUTR offers our stakeholders full security and confidence that the pulp in our supply chain is sourced according to the highest environmental regulations. ©REACH Registration, Evaluation, Authorization and Restriction of Chemicals (REACH) is an EU regulation that requires all companies manufacturing or importing chemical substances into the European Union in quantities of one ton or more per year to register these substances. We continuously monitor chemicals as they are updated in the REACH database so that we are prepared ahead of time for any changes in regulations and allowable materials.

Product certifications

Our Corporate Social Responsibility Report 2024 has been prepared in accordance with the GRI Standards (GRI 1: Foundation 2021) for the period 01.01.2023 – 31.12.202. This Content Index helps you navigate the reported disclosures and information.

<td>energy &amp; emissions</td>
<td>confidentiality contracts</td>
<td>Energy represents a significant proportion of the production costs for paper and board products, as well as converting processes. Specifying details about our energy consumption, energy intensity and fuel sources would provide competitors with considerable insights into delfort’s production costs and profitability. We deem this information commercially sensitive and therefore only partially disclose the required information. More specifically, we only disclose the total amount of electricity purchased by the organization.</td>
</tr>
<tr>
<td><strong>GRI 506:</strong> Economic Performance</td>
<td><strong>GRI 302:</strong> Energy consumption outside the organization</td>
<td>not applicable</td>
<td></td>
<td>Papermaking is energy-intensive. The proportion of energy consumption outside the organization is low compared to the energy consumption of paper production and printing processes. As a result, this KPI is not significant and therefore indifferent.</td>
</tr>

| 403-10 | Work-related ill health | 403-10 | Information unavailable | Not available | As a manufacturing company, workplace health and safety incidents are mostly physical accidents rather than work-related ill health. Due to data protection, we are unable to track statistics here.
CSR reporting
We have been publishing an annual CSR report in accordance with GRI standards on a voluntary basis since 2009. The data presented in this annual CSR report covers a full calendar year from January 1 to December 31, 2023 – the same period we use for our financial reporting. Our last CSR report was published in May 2023. The data compiled in this document reports the same key performance indicators (KPIs) and applies the same restrictions as in previous issues. It presents all KPIs for our six paper mills dunafin, feurstein, op papirna, tervakoski, wattenspapier, wattens vietnam, and our seven converting facilities mundet (in the USA and in Mexico), benkert (in Germany, Malaysia and China) and flexprint. During recent years, we have acquired wattens vietnam, mundet, benkert and flexprint. We closed delfortgroup printing services in 2021 and benkert UK in 2022. Because of lacking data, no attempt has been made to re-baseline or adjust historic group-wide data presented in the report by retrospectively incorporating data from these facilities. Please refer to the notes accompanying the KPI tables throughout the report, which describe how we have arrived at the global figures presented. No external assurance was pursued for this reporting year. The data compiled in this document reports the same key performance indicators (KPIs) and applies the same restrictions as in previous issues. It presents all KPIs for our six paper mills dunafin, feurstein, op papirna, tervakoski, wattenspapier, wattens vietnam, and our seven converting facilities mundet (in the USA and in Mexico), benkert (in Germany, Malaysia and China) and flexprint. During recent years, we have acquired wattens vietnam, mundet, benkert and flexprint. We closed delfortgroup printing services in 2021 and benkert UK in 2022. Because of lacking data, no attempt has been made to re-baseline or adjust historic group-wide data presented in the report by retrospectively incorporating data from these facilities. Please refer to the notes accompanying the KPI tables throughout the report, which describe how we have arrived at the global figures presented. No external assurance was pursued for this reporting year.
Economic, environmental and social impacts associated with delfort’s special fibers operations at op papirna remain outside the boundaries of this report. This is due to the minor scale of these operations, representing less than 2% of the total business from delfort’s paper mills.

Transparent paper packaging is a game changer! The unique combination of our expertise, agile product development and collaboration with our customers has resulted in a specialty paper that can be heat-sealed, allows easy visibility of bag contents and enables efficient barcode scanning. It is made from renewable materials and is recyclable according to the CEPI method. Our lightweight transparent papers have both OK Compost Home and OK Compost and is recyclable according to the CEPI method. Our lightweight transparent papers have both OK Compost Home and OK Compost and is recyclable according to the CEPI method.
