flexible packaging food

delfort

food packaging papers
for long shelf-life packaging

Flexible packaging for food plays a decisive role in our modern lifestyle. It is our ambition to reinvent paper by finding the right balance between required functionality and waste reduction of the paper packaging. We do this by optimizing paper properties, reducing material use and using renewable fibers. Our low grammage papers offer outstanding mechanical strength leading to potential basis weight reductions, and thereby having a yield advantage. Our wide range of high-density food packaging papers serves as a solution for barrier paper packaging (e.g., confectionery, frozen food), base paper for dry food bags, confectionery wrapping, pouches, and various laminates.

thinbarrier® pro, thinbarrier® ultra

thinbarrier® ultra

thinseal

thintwist®

thinbase® coat

thinbase® lamination, thinwrap™ fit

benefits

- yield advantages with low substances
- recycleable according to CEPI method (in areas where recycling facilities and collecting are available)
- savings on coating consumption
- high density paper with tight and equal fiber formation
- food safe
- FSC™ and / or PEFC certified and controlled pulp (FSC-C109921, PEFC/06-33-163)
- smooth haptic and high-class appearance
